# Black lock cylinders

## Strikingly subtle

### Cylinder designs for country-specific requirements

The dormakaba product portfolio offers the perfect solution for even the most varied of requirements – no matter whether our lock cylinders are to be installed conspicuously or inconspicuously. You can select country-specific cylinder designs such as the Swiss round profile or Scandinavian oval profile. Depending on the system, these types can even be operated together as part of an international master key system.

### Individual designs for specific applications

**01**  
Double cylinder (DZ)  
in different lengths. The  
modularity of the inserts  
makes it possible to match  
the length and design of  
reversible key systems.

**02**  
Single cylinders (HZ), e.g.  
for installation in switches  
or gates.

**03**  
WC lock cylinders (WZ) – for  
use in a wide possibility of  
applications.

**04**  
Camlocks (BMZ), e.g. for  
installation in mailbox  
systems.

**05**  
Cyl for cabinet locks (MZ)  
– an elegant solution for  
lockers.

### Individual locking solutions for special applications

dormakaba offers a variety of cylinder designs for very different requirements and applications to suit your individual locking solution.

The most common design is the double cylinder. It can be opened and closed from both sides with a key.

If you want to lock securely from the outside with a key and combine security and convenience inside with a single turn, the thumbturn cylinder is the right option for you. You can choose the one that is most suitable for you from our extensive portfolio of thumbturns.

Our single cylinders can be used, for example, to operate switches or secure garage doors.

For restrooms in particular, we offer a WC cylinder with an engaged display that can be opened from the outside in the event of an emergency.

Camlocks are ideal for post boxes because they allow you to conveniently open your post box using your house key.

Our extensive portfolio means even cabinets and furniture locks can be equipped with our lock cylinders and thus integrated into a master key system or operated as an individual closing.

# Homogeneous product design

## Black lock cylinders round off the dormakaba portfolio

Whether for access from the outside or, in this case, in the interior. Define the overall impression of your architecture using the coordinated and extensive dormakaba product portfolio. Please choose your desired colour combination from the products here.

01

02

- 01 Overall impression of your room architecture**  
Define the overall impression of your room architecture with coordinated components for access, either as combined solutions, or with harmonious uniform surfaces.
- 02 Harmoniously integrated TS 97 door closer**  
According to your preferences, our door closers stand out – or blend in.

- 01 NI | Natural nickel\*
- 02 MS | Natural brass\*
- 03 CR | Chrome-plated standard
- 04 NIC | Chemically nickel-plated
- 05 CRP | Polished chrome
- 06 MP | Polished brass
- 07 BH | Light brown
- 08 BM | Medium brown
- 09 BD | Dark brown
- 10 BKM | Black matt

\*Standard surface finishes

Colours are indicative only and are not available for all cylinder designs or thumb turns. Sometimes the colour of reversible and serrated key systems may differ slightly.

### Lock cylinder finishes

Since colours and finishes are an important design aspect, our mechanical lock cylinders come in a wide variety of finishes, with nickel-plated and natural brass as standard. The black lock cylinder is included in our range as BKM – black matt and is based on RAL colour 9005. Depending on your requirements and preferences, different finishes can be combined in one locking system.

### The dormakaba XEA design language

The XEA design language is based on a comprehensive, standardised position, consistently taking into account our own requirement for compatibility, high quality, innovation, perfection and aesthetics as stipulated in ten points. This principle unites basic forms, colours and surface finishes in a single, uniform appearance: XEA combines dormakaba's product and corporate worlds to form a universal design that speaks a recognisable language in terms of content and visual presence.

### Black lock cylinders blend harmoniously into our XEA design:

- 01 **SafeRoute escape route system surface-mounted terminal STL-G**  
Secure door management in one system. Easy opening in an emergency; protection against misuse on a daily basis.
- 02 **Argus sensor barriers – Good design can be planned.**  
The new Argus sensor barriers from dormakaba open up the way to greater freedom in terms of form, colour and function.

## Our Sustainability Commitment

We are committed to foster a sustainable development along our entire value chain in line with our economic, environmental and social responsibilities toward current and future generations. Sustainability at product level is an important, future-oriented approach in the field of construction. In order to give quantified disclosures of a product's environmental impact through its entire life cycle, dormakaba provides Environmental Product Declarations (EPD), based on holistic life cycle assessments.
