dormakaba

cloud-based access control

dormakaba exivo®
Providing a wide range of functions

dorma kaba
exivo
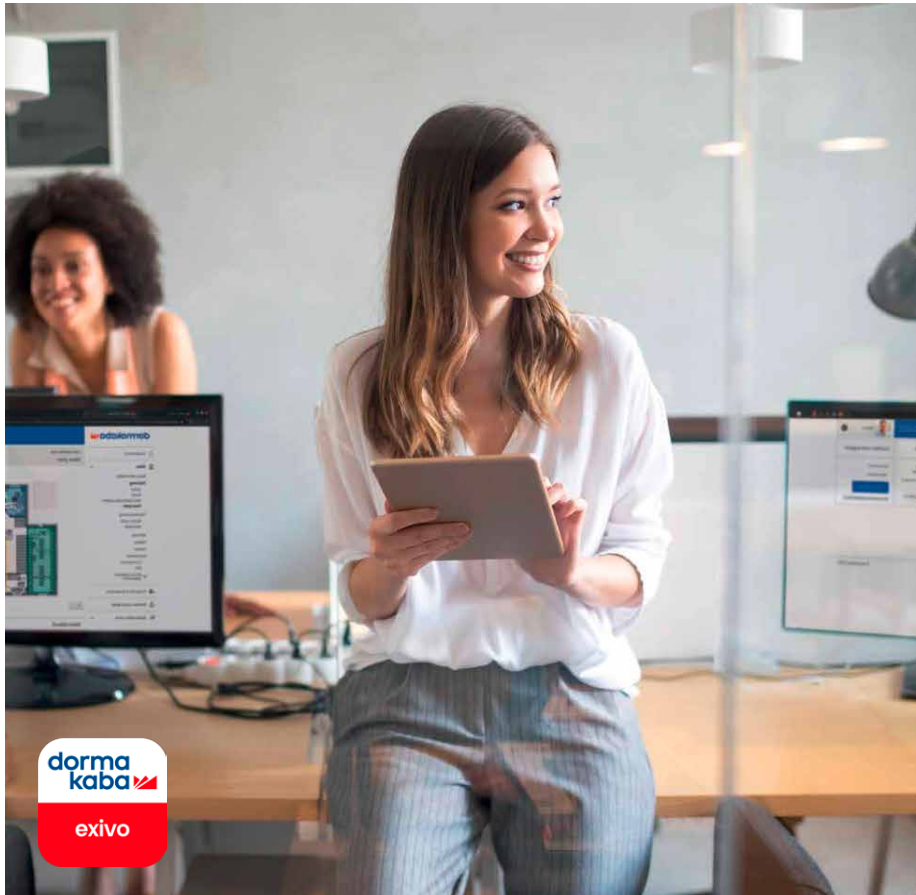

Advantages at a glance

- Access systems without additional software or servers
- Lower costs throughout the entire service life
- Updates available immediately
- Large selection of electronic door components for virtually any door situation

High-performance functions

- Simple deletion of lost RFID cards or keys
- Mobile Access – using the smartphone as an access medium
- Adaptation of access rights immediately adapted in the system and synched with the doors
- Time profiles for flexible and clearly structured access control management
- Convenient management of different groups of persons like employees, service providers or guests
- API – the interface enables seamless integration into your own booking or management system
- Main doors can be used by different operators
- Remote opening in emergencies

exivo – a smart solution for your access
exivo is a cloud-based access solution that integrates our smart, autonomously operated door locks, cylinders and access readers.

You need no additional server or software. Access management can be conveniently performed online, from anywhere – no separate installation or maintenance are necessary.

Access management with comprehensive functions
The software is intuitive to use and offers various functions that simplify your workflows. Apart from the usual access management, you can, for example:
- grant visitors access with their own smartphone,
- open doors remotely in an emergency,
- plan and install door component updates from your PC and
- use the optionally available API to integrate the solution into your own system and digitalise your bookings.

API – the complete integration into your company application
If you would like to automate processes like visitor, guest or employee management, our API interface can be used to fully integrate the user management into your system.

This makes your business model more resource-friendly and less time-consuming, as it eliminates the need for on-site key hand-offs: all users are given access at the precise time and location they need it, if necessary 24/7.

Factsheet

Persons & Access

In this area, you manage your users' data and their access media. This is where you adjust different types of settings, such as the visitor function, user media, persons and access protocols as well as history.

- Comprehensive filtering options for groups of persons
- **Access protocol** for all doors
- History of management processes
- Definition and assignment of **access media** such as cards, smart keys and key fobs with RFID as well as digital keys
- Visitors can open doors either through the web login or via **Mobile Acces**s with their smartphone; the invitation is sent electronically by email, SMS or via the digital key to the dormakaba Mobile Access app
- **Visitor function**: visitors' access rights for specific times and rooms are immediately active

Site

A comprehensive range of functions like door administration, access groups, time profiles and special days are provided here. A document storage allows administrators to save site-specific documents.

- Display of operating status of peripherals
- Updates for door components available via the cloud
- Overview of persons' access rights for each door
- **Shared doors**: administer jointly used doors of different building premises centrally in the system
- **Remote opening** of the door is possible in emergencies, or if a person has lost or forgotten their access medium
- Programmable **time profiles** with or without additional PIN entry as well as special days
- Prepared **alarm interface** for monitoring doors
- **Access groups**: Authorisations can be displayed exactly according to the area of responsibility in the company

Application users

You can define who can manage access rights in exivo. Also, external partners who assist administration can be listed here.

Flexible time profiles
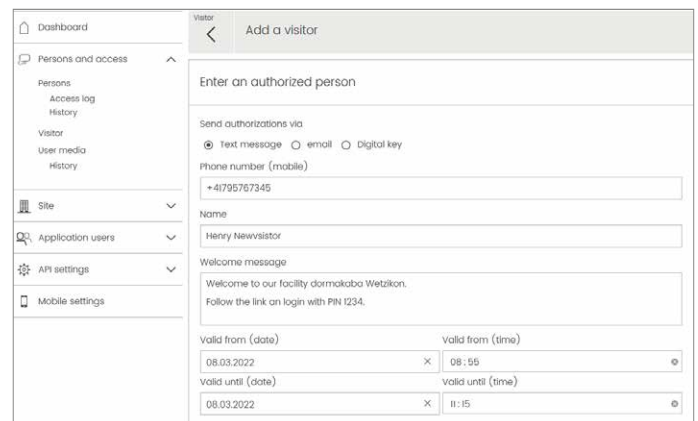

Visitor function

API: Integration into management and booking systems

The API interface provides commands for the above management and administration settings. It allows for the integration into our customers' existing software systems. The interface enables you to conveniently automate new business models like coworking, co-living, Bed & Breakfast, booking sports facilities, and more.

Good to know:
Services and support such as installation and maintenance can be outsourced to qualified service providers and partners.
