

It couldn't be easier

Temporary access – at the turn of a key

In the normal (vertical) key removal position the lock cylinder can be operated from the outside by the proprietor key only.

Keyway in normal position:
6 o'clock

Keyway in service position:
8 o'clock

In the service position the lock cylinder can be opened and locked from the outside and inside by the service and proprietor keys.

Key recognition at a glance

The service key is clearly identified by a code on the back of the key. The key is even easier to identify with one of the 12 colourful Smartkey or Largekey clips.

Temporary access for third parties with a purely mechanical cylinder: it couldn't be easier thanks to the dormakaba SAT function.

You decide, when service personnel have access

Temporary access – at the turn of a key

You want to grant service employees temporary access, but do not want to invest in an electronic access system? dormakaba has developed a simple, secure and inexpensive solution for you: lock cylinders with SAT function (Secure Access Temporary).

Easy and secure – for you and your personnel

Remove the proprietor key in the service position to grant another person - cleaner, dog sitter or neighbour – temporary access. Removing the proprietor key in the 8 o'clock position lets the service key open and lock the door the from outside and inside. The door is therefore secure while service personnel are on your premises. After work the service employee securely locks the door again from the outside.

You have full control – and access at any time

When you remove the proprietor key in the vertical position (6 o'clock) on leaving the building, the door cannot be opened by the service key from the outside. Even if your service employee has locked the door from the inside while working, you can still unlock it from the outside. You always have access. In addition to the service function on the outside door, you can define which other inside doors are to be opened with the service key. Your authorised dormakaba partner will be happy to help you find the best solution.

dormakaba is one of the largest suppliers of security technology. We look back on more than 150 years of experience and innovation. No matter where you need

reliable access and security solutions, in hotels, shops, sport facilities, airports, hospitals, at home or in the office, we are on hand with our high-quality portfolio.
