

MATRIX as a Service

Easy, secure and flexible access control

With MATRIX as a Service (MATRIXaaS), you benefit from the advantages of the comprehensive MATRIX ONE access control system, which is quick to install and intuitive to operate. At the same time, you can utilise the capabilities of a cloud-based, flexible solution which always remains up to date and secure.

MATRIXaaS is the ideal access solution for companies of any size and for start-ups which want to concentrate fully and completely on their core tasks. Updates, backups, recovery concepts and the set-up/operation of local servers cost lots of time and money. With MATRIXaaS, we offer you a straightforward solution that relieves you of these tasks: access control made easy – in line with the highest standards in terms of compliance, cybersecurity and data protection.

A cloud-based access solution with many advantages

Simple

Quickly put into operation –

We install and configure MATRIXaaS in no time in accordance with your needs. Its modern interface is intuitive to operate.

Predictable costs –

No need to invest in buying and operating your own server hardware. Instead, you can benefit from predictable monthly costs.

Smaller workload –

We take care of updates, backups and server operations so you can focus on your core business. No IT personnel are required on your part.

Strong

Stay up to date –

The automatic rollout of new releases from the cloud means your access control system is always up to date.

Increased security –

Thanks to the professionally hosted system, you benefit from maximum cybersecurity, GDPR-compliant data protection and full compliance.

High reliability –

We take care of installation and configuration, maintenance and fail-safe operation – optionally, with contractually guaranteed services as well.

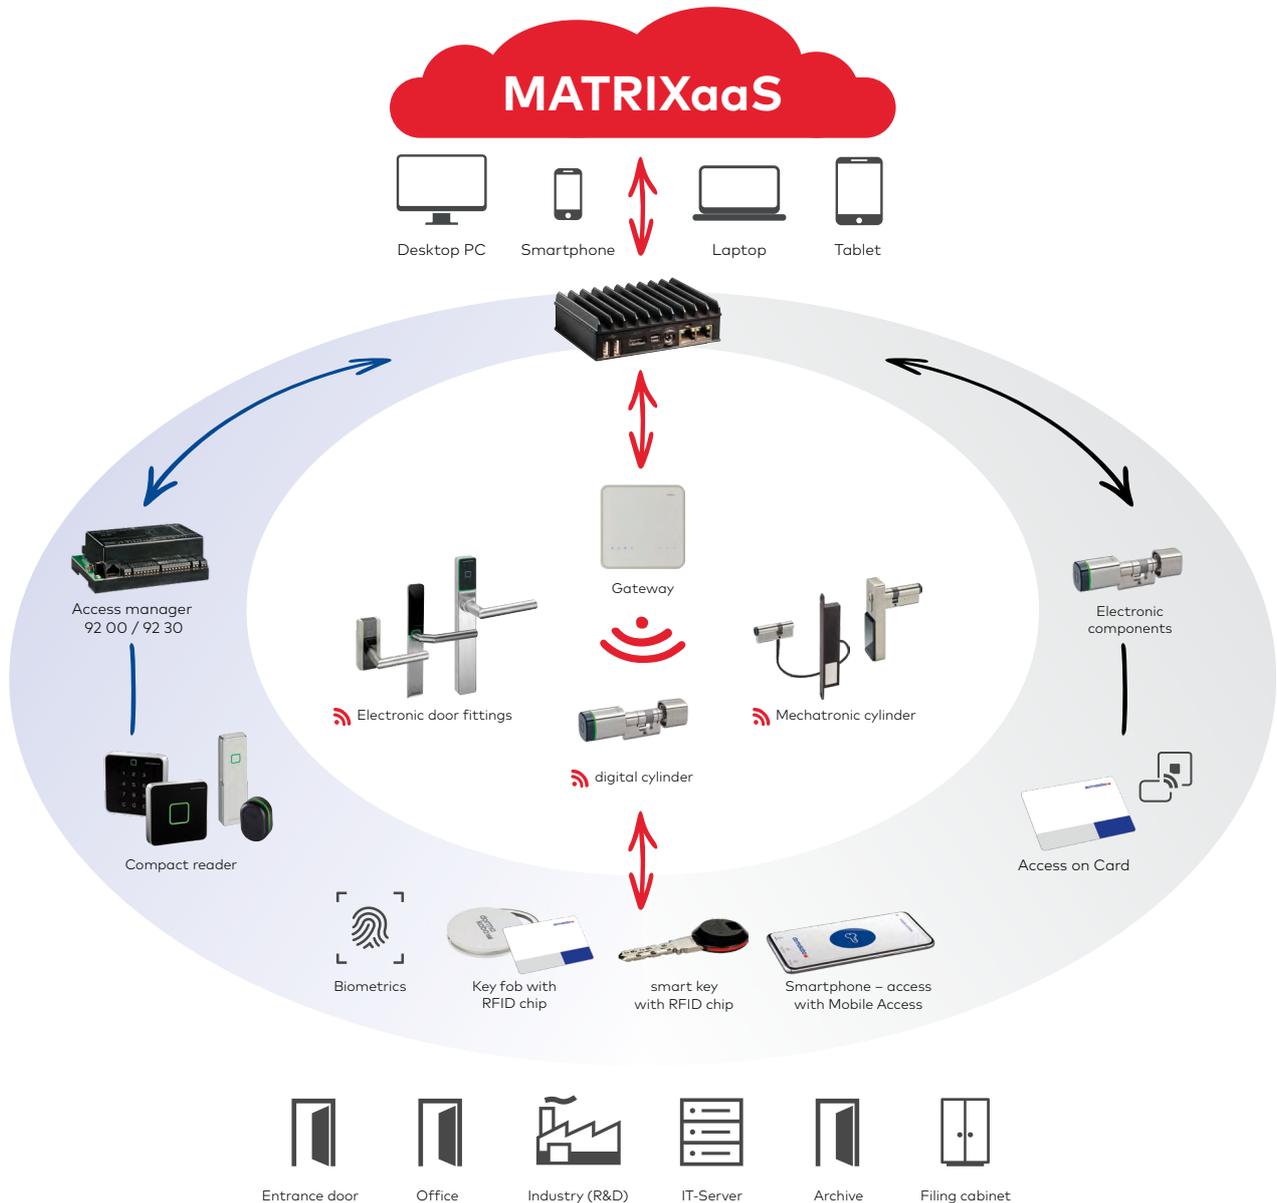

Flexible

Open for the future –

You can switch between MATRIX ONE and MATRIXaaS at any time depending on how your requirements and goals change.

The right protection for every access situation

The comprehensive dormakaba product portfolio offers you a modular hardware concept that is flexibly scalable for the use of MATRIXaaS. You can network your electronic access control components online, integrate them wirelessly, operate them completely independently (Access on Card) or use a combination of all three options.

Efficient and convenient

The range of applications is almost unlimited, thereby saving on wiring costs and time during implementation. Communication between MATRIXaaS in the cloud and the components always occurs securely via the IoT Box. The various different access media offer additional convenience for your employees.
