

MATRIX ONE

Access made simple

Advantages at a glance

Simple

- Uses the existing infrastructure
- Quick installation
- Effective implementation in your company organisation
- Minimal outlay in terms of cost, time and personnel
- Modular expansion through various options

Secure

- Reliable granting and refusal of access
- All data remains in your network
- Supports offline, online, wireless Access on Card and Mobile Access operating modes

Web-based

- Clearly structured interface for intuitive operation
- Browser operation via various end devices
- Modern, multilingual browser interface

How many doors are opened in your company every day? How often? And above all: by whom? With MATRIX ONE, you can answer these questions easily. From now on you can simply and securely control who has access to your premises where, when and how – or not.

You enjoy the benefits of an all-round easy-to-use system, both in terms of installation and operation: MATRIX ONE can be rolled out in no time and the modern interface is intuitive to use.

Access control enables efficient management of access authorisations

for small and medium-sized companies (up to 1000 employees) on the basis of simple key plans and/or fixed access profiles assigned to persons or groups of persons. General modifications can be implemented at a central point in no time via key plans.

MATRIX ONE is installed on a customer computer and is completely browser-based, meaning installation and maintenance couldn't be easier. Once installed, the system can be accessed via a browser from any desired end device on the network.

Thanks to the uniform operating concept, all functions are easy to manage. The intuitive interface adapts to the screen of the preferred end device and can thus be accessed via a smartphone or tablet, for example. The system is multilingual. This enables editing dialogues and data to be individually set to the user's preferred language.

MATRIX ONE supports the new device generation of access managers and evolved components as well as various operating modes.

MATRIX ONE: the right variant for every requirement

MATRIX ONE offers three different variants (S, E, O) to meet your individual requirements. There are two setups: a setup for MATRIX ONE S and a setup for MATRIX ONE E and MATRIX ONE O. This enables easy implementation, particularly for the MATRIX ONE S solution. The system is scalable. So you can easily expand MATRIX ONE and upgrade to the next variant.

Design access control entirely according to your wishes:

- Access functionality: profiles, weekly profiles, employee records, individual permissions, access weekly profiles, access daily times, room zones, encoding blank RFID cards and opening barriers via Nedap plate camera (possible in MATRIX E and O)
- Free selection of operation modes: offline, online, wireless, Access on Card, Mobile Access or mixed use

MATRIX one complies with the latest standards for access control. A free functional demo version is available on request.

The variants at a glance

Scope	Variants		
	MATRIX ONE S	MATRIX ONE E	MATRIX ONE O
Number of people	100	4,000,001	4,000,001
Number of doors	100	Not limited	Not limited
Access permission via locking plan	●	●	●
Access permission via fixed access profiles		●	●
Allocation of individuals and groups		●	●
Expanded functions			●
Mobile Access	●	●	●

System overview

Note: The system overview is just an excerpt.

Technical data

The MATRIX software can be installed on any current Windows computer. The H2 or SQL Express database is included in the supplied package.

Any questions?
We would be happy to answer any questions you may have.
