

Kaba TouchGo – Opens door with just a touch

What was once just part of science fiction movies is now a reality: doors unlock without having to look for a key.

TouchGo is the perfect solution for anyone who expects highest security as well as greatest convenience from their master key system. Doors can be opened comfortably by simply touching the door handle. You enjoy the flexibility of an electronic lock and keep the useful aspects of a mechanical master key system. Lost access media can be simply revoked and new ones easily programmed.

RCID makes it possible

RCID technology (resistive capacitive identification) was developed by dormakaba. It is based on the use of the body's natural electrostatic charge, and there are many more amenities to come from this technology. TouchGo is the first product equipped with RCID technology.

Programming for your home

Programming TouchGo is very easy. Touching the door handle with the programming master medium starts the programming process. Now all desired access media can be programmed by touching the handle with the corresponding user media in succession. The process is finalised by touching the door handle with the master medium.

Security for your home

The highest priority of any master key system is security. The same is true for the TouchGo but to a higher degree, because any access medium that is lost can be revoked quickly. This avoids both security gaps as well as the cost-intensive replacement of an entire master key system.

Along with the new convenience, this is another important advantage of the electronic access system

TouchGo:
**The standalone
solution for your home**

TouchGo user medium key fob with TouchGo and RFID function

TouchGo wristband with TouchGo and RFID function

Fast and easy programming through the door lever.

TouchGo

Full integration: TouchGo for your working environment

The perfect combination for offices: RFID, CardLink and TouchGo. c-lever with TouchGo function combines the advantages of a professional management system with greatest convenience for the user. This is because the electronic door furniture can be completely integrated into the dormakaba RFID world and even into the CardLink concept for online solutions.

Basic equipment

c-lever with the TouchGo function comes with an optional electronics module that integrates TouchGo features into the door furniture. All you need is a TouchGo access medium to enjoy the benefits of keyless entry. RFID functions remain valid and at the same time, you profit from the convenience of TouchGo.

Programming

All settings can be made with the programming device using the Kaba evolo manager or the Kaba exos 9300 software directly on your PC. An automatic alignment in the electronic lock synchronizes the RFID card with the TouchGo function, and the door handle is ready for immediate use.

Security

Even here, all requirements can be met. The c-lever with TouchGo and RFID function can be seamlessly integrated into the existing dormakaba security concept. Your system remains as secure as it was before: TouchGo is a convenience option that does not affect your security concept, but does ensure the highest investment protection

TouchGo: The professional solution with RFID

TouchGo user medium key fob with TouchGo and RFID function

TouchGo card holder TouchGo and RFID function

Maximum investment protection thanks to easy-to-program access media.
