Vacation Rental

Oracode
System Benefits

Security

Designed to increase security at properties, the Oracode system manages a temporary user's access control privileges. With the ability to record all transactions in the lock and on the web, accountability is clear:

- Codes are generated through a high-security server on the Internet
- Transactions at the lock or web application are traceable
- The system grants unique access for up to 128 different user types
- Valid codes automatically expire at the end of the authorized period
- The lock has the capacity to retain audit trail events, including the time and date of the last 5,000 events
- Locks are equipped with an emergency key override and include a bump-resistant core

Manage your vacation rental or short-term rental property from anywhere with Oracode. This web-based remote access solution is easy-to-use and will make granting access to your property simple. Oracode uses time-sensitive codes for an electronic pushbutton lock to manage access to your rental property. Since codes can be given days, months or a year in advance, there is no need to store or distribute keys or keycards to guests, staff or vendors. Property managers can create and send codes directly to their smartphone with the Oracode site.

Durability

Rigorously tested in a quality-controlled laboratory, 480i and 660i series locks adhere to high standards for strength and durability.

- The numeric keypad is vandal-resistant with solid metal push buttons
- Lock finishes can withstand the toughest climates and are suitable for ocean front applications
- Totally sealed unit with no exposed electronics
- Meets requirements of ANSI A156.25 for dust, rain, humidity, and salt spray corrosion tests

Simplicity

Oracode not only increases security but streamlines the access control process for management and staff, making it an easy way to manage when temporary users enter access points.

- No keys or cards to manage or replace
- The temporary user is given a time- and date-specific code that serves as an electronic key
- A code opens the lock only during the time-specific period authorized by the administrator
- Users do not have to check-in anywhere, pick-up or drop-off keys
- Eliminates rekeying and unauthorized key duplication
- Vendor meets are eliminated, saving time and money
- No need for wires, network, or wireless infrastructure
- Codes can be given verbally, by text, or e-mail
- No software to install
- Integrates with a variety of property management systems

Factsheet

Delivering keyless access for temporary users

Oracode Keyless Access

Oracode is an intelligent, electronic access control system that provides keyless access for temporary users, such as vacation renters, timeshare owners, and corporate housing tenants. Using a time- and date-specific code, Oracode eliminates keys and cards as well as time consuming access control management.

The system provides:
- Access management from a centralized location
- Operation from anywhere in the world
- Code generation in advance or a moment's notice
- Codes to work only between the start and finish parameters
- Code sent via Short Message System (SMS) or email to mobile device or laptop
- Integration into an existing Property Management System (PMS) system
- Management of temporary workers

Oracode Live

Oracode Live takes keyless entry to the next level. It provides all the features and benefits of the stand-alone system in addition to real-time notifications and alerts, such as Guest First Arrival and Internet Down. Oracode Live also allows managers to generate, cancel, or extend access codes remotely.

With Oracode Live, property managers no longer need to visit a door lock to perform the initial lock programming. Managers can simply activate Oracode keyless locks from a centralized location.

In addition, the new Oracode Live site allows you to send access codes via smartphone or tablet. Additionally, lock codes continue to function if power or internet service is lost.

Enterprise Property Control

When the Oracode access control system integrates into the BeHome247 energy management system, managers can further enhance the guest's rental experience by creating a welcoming and comfortable environment.

With a few keystrokes, the BeHome247 system allows managers to:
- Monitor and control a property's temperature
- Turn on/off lights
- Adjust pool/spa settings, lights, and pumps
- Receive notification when the HVAC system or appliance is out of service
- Shut down the water supply to prevent frozen pipes

These fully automated controls not only streamline property operations but save time and money. When the property is unoccupied, the BeHome247 Enterprise Property Control™ system monitors and regulates energy settings, reducing energy consumption and maximizing savings.

Any questions? We would be happy to advise you.
