

Design and mechanics combined
Elegant black mechanical lock cylinders

New, elegant black lock cylinders.

Refined finishes

Our lock cylinders come in a variety of enhanced finishes. Now, an exciting shade of black has been added, which is available for serrated and reversible key systems.

Uniform black for serrated and reversible key systems.

Black lock cylinders

Strikingly subtle.

Cylinder designs for country-specific requirements

The dormakaba product portfolio offers the perfect solution for even the most varied of requirements – no matter whether our lock cylinders are to be installed conspicuously or inconspicuously. You can select country-specific cylinder designs such as the Swiss round profile or Scandinavian oval profile. Depending on the system, these types can even be operated together as part of an international master key system.

Individual designs for specific applications

- 01** Double cylinder (DZ) in different lengths. The modularity of the inserts makes it possible to match the length and design of reversible key systems.
- 02** Single cylinders (HZ), e.g. for installation in switches or gates.
- 03** WC lock cylinders (WZ) – for use in a wide possibility of applications.
- 04** Camlocks (BMZ), e.g. for installation in mailbox systems.
- 05** Cyl for cabinet locks (MZ) – an elegant solution for lockers.

Individual locking solutions for special applications

dormakaba offers a variety of cylinder designs for very different requirements and applications to suit your individual locking solution.

The most common design is the double cylinder. It can be opened and closed from both sides with a key.

If you want to lock securely from the outside with a key and combine security and convenience inside with a single turn, the thumbturn cylinder is the right option for you. You can choose the one that is most suitable for you from our extensive portfolio of thumbturns.

Our single cylinders can be used, for example, to operate switches or secure garage doors.

For restrooms in particular, we offer a WC cylinder with an engaged display that can be opened from the outside in the event of an emergency.

Camlocks are ideal for post boxes because they allow you to conveniently open your post box using your house key.

Our extensive portfolio means even cabinets and furniture locks can be equipped with our lock cylinders and thus integrated into a master key system or operated as an individual closing.

Homogeneous product design

Black lock cylinders round off the dormakaba portfolio.

Whether for access from the outside or, in this case, in the interior. Define the overall impression of your architecture using the coordinated and extensive dormakaba product portfolio. Please choose your desired colour combination from the products here.

01

02

01 Overall impression of your room architecture

Define the overall impression of your room architecture with coordinated components for access, either as combined solutions, or with harmonious uniform surfaces.

02 Harmoniously integrated TS 97 door closer

According to your preferences, our door closers stand out – or blend in.

Lock cylinder finishes

Since colours and finishes are an important design aspect, our mechanical lock cylinders come in a wide variety of finishes, with nickel-plated and natural brass as standard.

The black lock cylinder is included in our range as BKM – black matt and is based on RAL colour 9005.

Depending on your requirements and preferences, different finishes can be combined in one locking system.

The dormakaba XEA design language

The XEA design language is based on a comprehensive, standardised position, consistently taking into account our own requirement for compatibility, high quality, innovation, perfection and aesthetics as stipulated in ten points. This principle unites basic forms, colours and surface finishes in a single, uniform appearance: XEA combines dormakaba's product and corporate worlds to form a universal design that speaks a recognisable language in terms of content and visual presence.

Black lock cylinders blend harmoniously into our XEA design:

- 01 **SafeRoute escape route system surface-mounted terminal STL-G**
Secure door management in one system. Easy opening in an emergency; protection against misuse on a daily basis.
- 02 **Argus sensor barriers – Good design can be planned.**
The new Argus sensor barriers from dormakaba open up the way to greater freedom in terms of form, colour and function.
