

Effortless access management for your hotel rooms

CheckIn by dormakaba

A convenient and safe stay – controlled by modern technology.

CheckIn is an easy-to-use software for the daily administration of access rights for guests and personnel.

With the range of our evoluo door components, solutions can be offered for nearly all access situation. The entire installation can be carried out quickly by your trusted dormakaba partner following brief planning.

The access cards are easily programmed with CheckIn at the reception using the desktop reader. If a guest requires more than one card, these are duplicated in seconds by just a mouse click.

All guests receive their individual, time- and room-specific card and can use the main entrance, hotel elevator, their room, the fitness room or the spa.

The door components offer additional convenience thanks to the intuitive user guidance with acoustic and optical red/green signalling.

Main advantages:

- Fast and easy installation of the battery-operated door elements.
- The user-friendly software is available in many languages and enables efficient CheckIn/CheckOut.
- Additional guest cards are duplicated easily and quickly.
- Cards which guests have forgotten to return automatically lose their authorisation. Through a service medium, lost cards also can be revoked during the stay.
- The guest cards are indefinitely reusable.
- Seamless integration: mechanical keys can also be administered using the software.
- Traceability of the door activities is possible if required, thanks to the audit trail.
- Emergency opening: Emergency access cards or a mechanical locking cylinder can be integrated easily
- The privacy function can be implemented using a mechanical thumbturn cylinder.
- Wide range: for each access point there is a suitable solution, whether for the room, elevator, fitness room, wellness area or the underground car park.

The reception area – making a good impression.

Guests receive a room-specific access card with an individual validity duration, while you maintain an overview of all room occupancies.

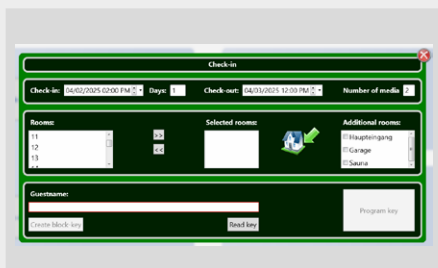

CheckIn administration software

- No additional costs if a key is lost: The expensive replacement of keys or lock cylinders belongs to the past. Each guest is given an access card with a defined validity period.
- Clear graphic display of the room occupancies can be retrieved anytime.
- Intuitive operation of the software: No staff training is required, the language can be changed individually.
- Simple traceability of door movements in the event of unusual incidents: The electronic door components record all entries. Thanks to this, you are able to analyse who entered the room when, in case of damage, theft, etc.

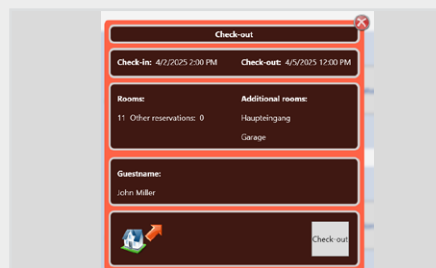

The desktop reader

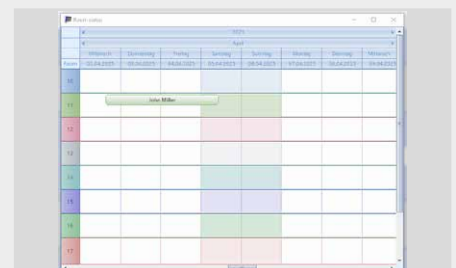

- Easy programming: Access media for guests can be conveniently programmed at the reception.
- Flexible key management: Issuance of access cards upon request of the guest. Several rooms per guest (suite function) and multiple cards per guest are also possible.
- If access rights of staff and guests need to be changed, there are often complicated hurdles when using regular locking systems. In most cases, a change or upgrade is very costly. Not with CheckIn, where you can benefit from its versatility and programming options.
- Simply connect the desktop reader to the PC using the USB connection and get started.

CheckIn mode: room- and time-specific programming of the guest cards

CheckOut mode: the guest cards are revoked with one click

Room status: the room occupancy is visible at a glance

Our Sustainability Commitment

We are committed to foster a sustainable development along our entire value chain in line with our economic, environmental and social responsibilities toward current and future generations. Sustainability at product level is an important, future-oriented approach in the field of construction. In order to give quantified disclosures of a product's environmental impact through its entire life cycle, dormakaba provides Environmental Product Declarations (EPD), based on holistic life cycle assessments.
