B-COMM for PeopleSoft Time and Labor
A Proven Time Collection Solution

An Enterprise-class Solution
B-COMM by Kaba

B-COMM for PeopleSoft Time and Labor

In today's competitive healthcare environment, medical service providers are tasked with offering the highest quality care to their patients, while remaining feasible and cutting-edge in light of rising healthcare costs. In addition to managing labor costs, providers must control the risks associated with staff shortages, new regulations and quality assurance. To oversee and effectively administer pay rules and pay policies, many healthcare providers require a system that will integrate with their ERP system, and also eliminate the manual entry of employee time.

B-COMM for PeopleSoft, is an Oracle validated communication software application that links PeopleSoft Time and Labor to a wide range of time collection devices including time clocks, mobile, and IVR options. Kaba's B-COMM solution makes it easy to collect, evaluate, and manage time entry. B-COMM for PeopleSoft provides secure, seamless bi-directional communication via standard API's.

This innovative time collection approach can result in substantial savings by controlling the environment from which employees enter their time. Management will have real-time visibility to crucial information contained in the payroll and finance departments. B-COMM for PeopleSoft Time and Labor also provides a means of minimizing potential compliance risks commonly found in a global and/or diverse workforce. Timely collection of data enables medical centers to simplify decision making, maximize employee resources, increase efficiency, and reduce costs.
