Rely on dormakaba's data collection solutions to accurately capture employee time activity for payroll processing.

Data collection options to fit your needs. Accurately recording time and labor activities is the foundation for controlling labor costs. dormakaba provides cutting-edge devices and technology that are scalable as your company grows, and can be used together or individually.

dormakaba's flexible data collection methods allow companies to choose the solution that is the best fit for their workforce. Facility type, and collection needs. Each option fits seamlessly into your multi-channel data collection strategy.

dormakaba solutions are also easy-to-use and feature:

- Intuitive guide-by-light functionality
- Ruggedized protection
- Various reader types (RFID, Biometrics, Barcode or Magstripe)

Factsheet

Data collection options

dormakaba data collection terminals

dormakaba offers a variety of time collection devices to fit your organization's size and unique time and attendance, and labor tracking needs. dormakaba clocks include the B-web 93 00 Series, B-web 95 00 series, and our newest device, the dormakaba Terminal 97 00. Each device is designed with a user-friendly interface and customizable configuration. dormakaba terminals support employee ID entry (i.e. username and password), badge swipe, and biometric identification. All devices support Employee/ Manager Self-Service features.

PC/Web data collection

dormakaba offers the ability to leverage your existing PC's by enabling data collection via your laptop or desktop computer. Employees can enter their time and labor information and access employee self-service features all from the convenience of their desk. The dormakaba PC client data collection method provides all of the same functionality and security validations as a dormakaba terminal.

Mobile data collection

dormakaba offers the ability for your employees to capture their data on the go! Our solutions are designed with HTML 5 technology and optimized for mobile. Employees can easily enter time activities from their mobile device (iOS or Android), while experiencing the same intuitive features of other time collection devices, including Employee/Manager Self-Service.

Interactive voice response

The IVR data collection method is ideal for companies with remote, mobile, and field employees. IVR can be used as part of a broader multi-channel approach to automated time and attendance data collection, as it works seamlessly with other collection methods. With IVR, employees hear clear, professional audio prompts and confirmation messages that make time recording easy.
