

# No more slamming doors – for greater living comfort

## ITS Home – the integrated door damping system

Soft closing- even in strong drafts.

### Door comfort has a name: ITS Home

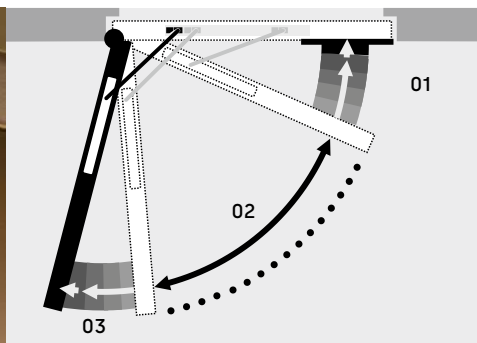

Whether in private homes, offices or public buildings – ITS Home ensures soft closing, barrier-free access and controlled opening of every door.

ITS Home is an integrated soft-closing system for doors, inspired by the smooth functionality of drawer slides and kitchen furniture.

### Innovative damping technology decelerates doors

- Rapid opening and closing, or uncontrolled slamming is slowed down in a controlled manner.
- The damping force can be adjusted.
- Opening and closing takes place with minimal initial resistance, which is hardly noticeable – similar to a standard interior door.

# ITS Home: Almost invisible for doors up to 100 kg

- 01 Soft-close damping:**  
From approx. 25°, the door slows down and closes softly and automatically.
- 02 Free swing:** Between approximately 25° and 85°, the door functions like a regular door and can be set up in any position.
- 03 Opening damping:** From approx. 85°, the door slows down and automatically opens gently up to approx. 115°.

Quiet door closing – for undisturbed concentration in the office.

## ITS Home: Proven technology for framed and solid leaf doors

- No components are visible when the door is closed. The ITS Home is fully integrated into the door leaf and door frame.
- Requirement: A door leaf thickness of at least 40 mm and a maximum door leaf weight of 100 kg.
- Optionally, the ITS Home can be enhanced with a door hold-open device.
- The ITS Home is durable and maintenance-free – a hallmark of dormakaba.
