

1st generation keys

2nd generation keys

When inserted and rotated 360°, the 1st generation keys lose their locking authorization.

3rd generation keys

By inserting and rotating them 360°, the 2nd and 1st generation keys lose their locking authorization.

Lock cylinder

The conversion process is carried out without a separate conversion key – no replacement of the lock cylinder is required.

pextra Q self changing cylinder (SUZ)

3-in-1 lock cylinder: Change the access permission with a turn of the key

dormakaba's tried-and-tested pextra Q serrated key system provides multi-layer protection for high-security serial cylinders and master key systems. Its versatility makes it ideal for securing and organising access to any building – not only family homes and residential complexes, but also public buildings and industrial properties.

Our unique SUZ feature allows the keying of the cylinder to be changed up to two times, without having to remove the cylinder. Simply insert the next sequential key number and rotate 360 degrees. This disables the previous key from operating the cylinder. With no additional tools needed, the pextra Q SUZ function provides fast and efficient mechanical access management.

SUZ is available on all common cylinder profiles including:

- Euro profile double, single and thumbturn cylinders
- Nordic oval profile cylinders
- Union oval profile cylinders
- Rim cylinders & Screw-in cylinders
- Furniture and cabinet locks
- Camlocks, Key switch cylinders & Elevator control cylinders
- Bible cylinders

What's in the BOX?

- pextra Q SUZ Cylinder
- 3 keys as standard
 - Key 1 (Green)
 - Key 2 (Red)
 - Key 3 (Blue)
- Cylinder fastening screw
- Security card for proof of ownership for duplicate keys
- Installation and maintenance instructions
