

Keyscan Aurora 2.0

Access control software

Keyscan Aurora 2.0 is available, offering a new user experience, more features

Discover the next evolution in access control with Keyscan Aurora 2.0, designed to deliver a faster, smarter, and more intuitive user experience.

This powerful update introduces over 50 new and enhanced features that streamline system management and improve daily operations.

Aurora 2.0 now supports the latest KC Series controllers, bringing enhanced performance and expanded capabilities to your security infrastructure.

Enjoy improved desktop accessibility, customizable platform themes with dark or light/blue options, and new keyboard shortcuts that boost efficiency.

The addition of a global ACU report provides greater visibility and control across your entire system.

Whether you're managing a single facility or multiple locations, Aurora 2.0 empowers you with the tools you need to work smarter and respond faster.

All Aurora users are encouraged to upgrade to the latest version to take full advantage of these new features and ongoing enhancements. For complete details and release notes, visit dormakaba.us.

Performance and sustainability with more features and enhanced capabilities

Performance and sustainability with more features and enhanced capabilities

Secure environments demands accurate identification and authentication of credentials when admitting authorized personnel. The Aurora access control software provides a secure platform solution for facilities requiring authorized access to secured areas.

Aurora is the cornerstone of our approach to access control.

Integration is a common thread for optimizing access control systems.

With an emphasis on performance and sustainability, Aurora access control software provides just that.

With many features and integration options, it provides a single solution for access control with no limiting or expansion governors or recurring fees. Aurora is ideal for any access control application, regardless of application, size or complexity.

Web client • user interface:

Control your system from any web-enabled PC or mobile device

Optional licensed modules:

For integration with VMS; Intrusion; Biometric, Visitor Management systems and more

Software as a service (SAAS):

Centrally managed access control for multiple locations

Enhanced network-based lockdown:

Ideal for any scenario demanding an emergency response plan

Software Development Kit (SDK) or API license:

Available for custom integrations

Multi-language support:

English, French, Spanish and Portuguese
