

Access Control That Suits your Needs

evolo Manager by dormakaba

Creating Safety and Efficiency

The evolo Manager offers clever offline
and remote access control.

With the evolo Manager system, your organisation benefits from an easy-to-program access control solution.

From individual doors to all access points in your building, for employees, visitors or suppliers – for inside and outside.

The evolo Manager's expandable concept allows you to easily adapt your access system to changing requirements, protecting both your building's security and your investment.

As your partner in access and security, dormakaba brings years of experience and expertise to the table. Our team is made up of highly qualified professionals in system and service technology, operations planning, and support.

We prioritize personal contact with our customers and partners to provide the best possible support, quick response times, and excellent customer service.

Seamless Access For any Door

The evolo Manager System provides a flexible all-in-one solution: With standalone-operated electronic door locks, it enables seamless integration and an expansion of the access system at any time.

Main features

- Effortless integration of our standalone door components that support wireless as well as Bluetooth®.
- Ability to grant access rights with pre-determined activation and expiration times, such as temporary access for visitors
- Grant access to many users:
 - with whitelist, up to 4,000
 - with CardLink, nearly unlimited
- Create up to 512 different access groups with different authorisations
- Assign individual access rights with specific time windows
- If needed, the audit trail can store up to 2,000 door events
- Mobile access function: send access rights to users smartphones via the dormakaba mobile access app
- Practical solution for lifts or letterboxes: control access rights for up to 49 floors (or mailboxes) with just one reader

Key benefits

- From small- to large-scale integration: can be used for individual access points all the way up to large systems, covering nearly all door situations
- Convenient and quick granting of access rights
- Long-term investment protection thanks to combinable products in the same uniform design
- The expandable concept enables door components to be added easily, making it both scalable and adaptable
- Flexible choice of access media including mobile devices, cards, smart keys, PIN, or key fobs with RFID, suiting individual needs
- Maintain security of your access system even if access media are lost
- Seamless integration into other dormakaba systems
- Expand and co-manage your existing mechanical master key system with this user-friendly system

Discover a Unique Selection

Programming

User media

c-lever door locks

- c-lever pro
- c-lever compact

The c-lever pro cover plate is available with or without a cylinder cut-out. The mechanical cylinder shown is not part of the range.

Digital cylinders

The digital cylinders are available with many different surfaces, versions and lengths and are used in both indoor and outdoor areas.

Mechatronic cylinders

- Compact version
- Surface fixed version
- Forend version

Access readers

- Remote reader
- Compact reader
- Remote reader – special solution for lifts & letterboxes (whitelist only)

Cabinet locks

Electronic access control for cabinets and lockers.

Legend

- Mobile Access function available
- Supports Bluetooth®
- Wireless function available
- CardLink function available

Access Media

One System, Many Options

Our selection of access media and technologies helps to tailor access to your needs. Simplify your life with smart technologies like RFID and Bluetooth®, that allow you to access mechanical or digital components, outdoor barriers, entrances, and office doors with just one badge instead of carrying a bulky key bundle.

The classics – card and key

Our access media are based on RFID chip technology. Integrated into the evolo system, they are given a special encryption to ensure secure and controlled access. In case of loss, access rights can be easily revoked and new access media can be programmed just as easily.

Always by your side - the mobile phone

The Mobile Access function allows you to use your mobile phone as an access medium. Easily assign access rights to users on your computer, eliminating the need for physical access media. Send personal access rights to individuals, regardless of their location.

The smart key - a true all-rounder

Whether it's electronic or mechanical access control or time recording, the smart key is the key that connects the two worlds. It opens both mechanical and electronic doors - a real multi-tasker. Various color options help the user easily recognize the key.

No key, no card – access with just a PIN

Our access readers with built-in PIN keypads offer maximum flexibility. Doors can be conveniently opened using a door code or a personal PIN. Alternatively, the readers support RFID and mobile access for fast, contactless use.

The Wireless Function

Remote Programming

Safe and effortless access with radio waves

The wireless feature offers quick and efficient access control without having to install cables at each door.

Easily manage access rights from your computer, quickly issue new badges and revoke lost keys, and send the updated access information to our wireless gateways for seamless transmission to our standalone-operated door components.

Manage up to 16 door components with one single dormakaba wireless gateway. You are able to expand coverage with up to 8 wireless extenders.

Your door events are clearly displayed and battery statuses can be retrieved at any time. Streamline your processes and save time and resources by performing maintenance tasks, including firmware updates, conveniently from your desk.

Our Range of Door Components

Every access point has specific challenges. With the evolo Manager, a uniquely wide and dynamic range of access components is available to you. From digital cylinders to door furniture and access readers: designed to meet your access requirements.

The digital cylinder – modern safety, quickly installed

Upgrade your door quickly with our digital cylinder. This compact, user-friendly device provides visual and acoustic access signals and connects wirelessly to your system for added convenience. Available in a variety of lengths, colors, and cylinder profiles, it's also suited as a solution for escape route doors.

The c-lever pro – security and design in one

The c-lever pro electronic door furniture is designed for exterior or interior doors, offering an increased level of security. Provides break-in and fire protection as well as solutions for escape routes. Built with high-quality materials for durability, weather resistance and security. Optional Mobile Access and wireless functionality.

The c-lever compact – small is beautiful

Combines design and high functionality and requires minimal space. This smart electronic door fitting replaces mechanical lever handles easily; the cylinder stays independent. Suitable for office and glass doors.

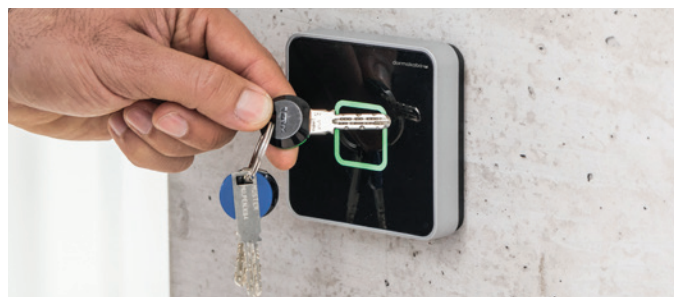

The mechatronic cylinders – practical and sturdy

The mechatronic cylinders provide a smooth connection between electronic access control and mechanical systems, integrating seamlessly into existing master key systems and adding an extra layer of security. Usage for both interior or exterior doors and available in three versions, each with its own special features.

The compact reader – slim and exclusive

The narrow compact reader blends well into the building structure. Its design allows it to be installed directly onto the door frame, creating an unobtrusive access point.

The remote reader – safety and convenience with the wireless option

The remote reader enhances security at the exterior of buildings by utilizing a separate reading unit and electronics, providing a high level of tamper resistance.

An optional extension module adds the wireless functionality, allowing the reader to receive access data remotely. With this, it can be used as an access reader or update reader.

The cabinet lock 21 10 – for clever protections of documents and materials

The cabinet lock 21 10 seamlessly integrates into your access control system. Administer access to documents and objects efficiently. With the RFID badge, there's no need to turn a key or insert a coin. Design the front of your locker as you wish since the lock itself is discreetly installed on the inside.

The locker lock 21 20 – a smart wardrobe solution

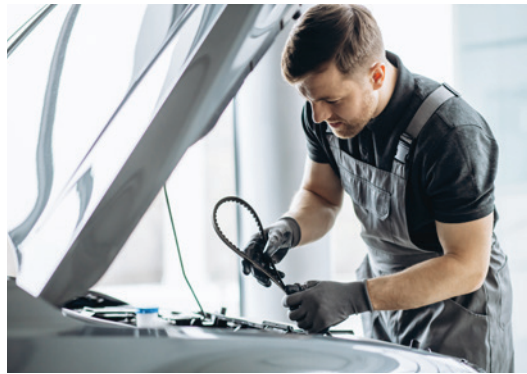

The locker lock 21 20 comes in a slim, elegant and compact design and offers a wide range of functions as well as a full overview of who has access and when. This lock is particularly easy to install and is made for metal cabinets. It can be utilized in various settings, like for lockers in offices, schools, and universities.

A Wide Range of Applications

01

02

The dormakaba evolo Manager is versatile and suited for a variety of sectors, including:

01
Offices & administrative buildings

02
Commercial enterprises & workshops

03
Medical centres and nursing homes

04
Factories & service companies

05
Schools & universities

Easy Programming – A Step-by-step Concept

The centrepiece of the evolvo Manager

Streamline your access with the dormakaba evolvo Manager (KEM) software. Manage users, credentials and door components with ease using its user-friendly menus and workflows. Quickly assign time- and room-specific access rights and program door components while keeping an overview of all your door and system events.

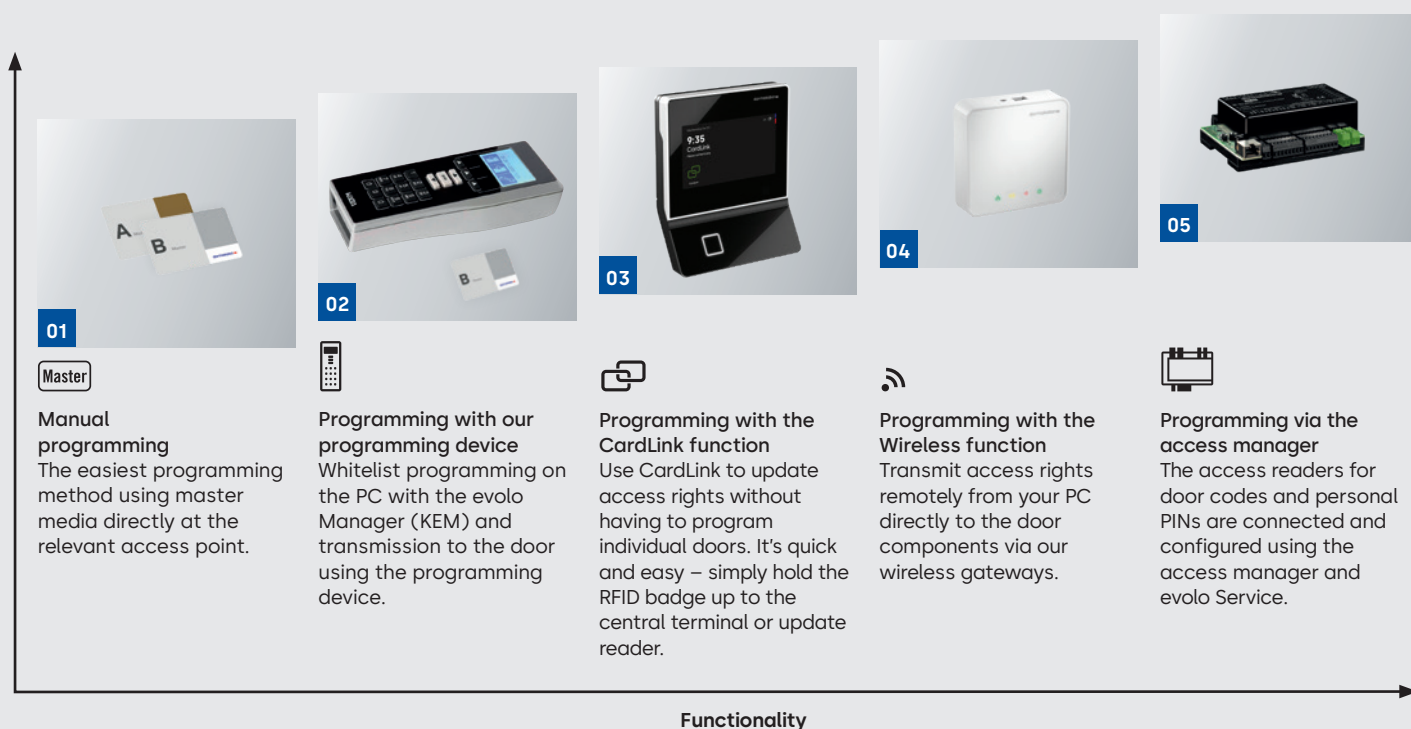

Overview of the KEM features

- Configuration of user profiles and access rights
- Definition of time profiles
- Recording and monitoring of door events
- Access media management
- Administration of electronic door components and co-administration of mechanical door locks

Five programming options

Depending on your requirements, you can choose between manual programming directly at the door using master cards **(01)** or configuration and transmission to the door using the programming device **(02)**. The third, fourth and fifth options are offered for larger systems: program remotely from your PC using the CardLink **(03)**, wireless function **(04)** or via access manager **(5)**.

Our Sustainability Commitment

We are committed to foster a sustainable development along our entire value chain in line with our economic, environmental and social responsibilities toward current and future generations. Sustainability at product level is an important, future-oriented approach in the field of construction. In order to give quantified disclosures of a product's environmental impact through its entire life cycle, dormakaba provides Environmental Product Declarations (EPD), based on holistic life cycle assessments.
