Lock doors securely without a key – automatically each time the door is closed. Open closed doors easily from the inside – just by pressing the lever handle.

dormakaba Emergency-escape locks with automatic locking action provide intrusion protection, rapid emergency opening and controlled access. Mechanical, electric or motor-operated.

01

02

Emergency-escape locks with automatic locking action.

Security in three directions: escape route, intrusion protection and door condition check

Emergency escape function – door can always be opened quickly from the inside

The doors in an escape route must be able to be opened in the direction of escape using the lever handle, even if the door is locked.

- dormakaba emergency-escape locks can be opened from the inside at any time
- Approved for use in escape routes and in fire and smoke doors
- Certified in accordance with EN 179 or EN 1125

Break-in protection – door is securely locked from the outside

dormakaba emergency-escape locks with automatic locking action automatically lock doors after each closure.

- Insurance-compliant lock due to 20 mm deadbolt throw and additional engagement of the clawbolt latch (for SVP/SVZ/SVA)
- Increased break-in protection with multipoint locking system (M-SVP)
- Integrated status queries for door surveillance (for electrically connected lock variants)

01

Retrofitting of an existing door to escape route door according to EN 179 with purely mechanical SVA 5xxx emergency-escape lock on the active door leaf and SVI 5xxx on the passive door leaf

02

Individual door with emergency-escape lock with automatic locking action SVP 2xxx as escape route door

03

Double-leaf door with TS 93 as escape route with SVA 2xxx F (active door leaf) and SVI 5xxx (passive door leaf)

Unlocking – authorised entry or exit

Access from the outside is possible at any time via the locking cylinder (normal lock function). Depending on the product variant, further unlocking options can be activated at the lock:

- Access after electrical release, e.g. in access control systems
- Permanent access – with or without actuation of the lever handle depending on the type of lock
- Further control options depending on the lock connection (control unit), such as timer, latch locking during day function or control pulse for an automatic actuator

Communication – notification of door/lock status

Most locks with automatic locking action can detect and pass on different door/lock statuses. Depending on the lock variant, the notifications are transmitted as analogue or digital signals (DCW®/CAN bus).

- Lever handle operated
- Door locked or unlocked
- Door open or closed
- Cylinder locking activated
- Additional monitoring functions depending on the connected systems, e.g. switching signal for alarm systems or electrical switch-off of the access control/ input for fire detection system BMA
- All status monitoring detectors are tamper-proof

Connection – operation as an individual door or as part of a system

Depending on the area of application, a lock can be operated as a "stand-alone solution" or as part of a system, e.g. in conjunction with an automatic actuator (ED 100/ED250) or as part of an emergency exit and escape route system. Depending on the type of lock, different connection options are available:

- Direct analogue
- Via an SVP control unit
- Via DCW® bus, e.g. as part of a SafeRoute emergency exit and escape route system

Selection guide for emergency-escape locks with automatic locking action – the right lock for every requirement

The dormakaba lock range offers comprehensive solutions for single- and double-leaf timber and profile-framed doors for new and existing door systems.

- Emergency escape function in accordance with EN 179 or EN 1125
- Insurance-compliant lock with two-point locking device via deadbolt and engagement of the clawbolt latch (SVP, SVZ and SVA lock combinations)
- Increased security with multipoint locking systems (M-SVP locks)
- Purely mechanical locks, e.g. for retrofitting existing door systems
- Switch locks, e.g. for monitored doors, in connection with access control systems
- Motor-operated locks, e.g. for barrier-free automatic doors
- All locks available in different versions and locking cylinder types

M-SVP locks and SVA/SVI lock combinations for double-leaf doors

Ordering Assist
With the dormakaba ordering assist you can easily find the right lock for your door requirements.

<https://svpassist.dormakaba-tools.de/en-GB/>

Selection guide for a single-leaf door

Essential requirement: The door can always be opened from the inside (emergency escape function) and locks automatically after each closure (insurance-compliant lock).

01

02

Selection guide for double-leaf doors

Essential requirement: The door can always be opened from the inside (emergency escape function) and locks automatically after each closure (insurance-compliant lock).

Step 1: Determine the lock for the active door leaf

Step 2: Select the lock for the passive door leaf depending on the active leaf lock

Possible combinations SVA active door leaf locks/SVI passive door leaf locks				
SVA 5xxx	●	○	-	-
SVA 4xxx / SVA 6xxx	●	●	-	-

● Compatible ○ Optional – Not possible				

SVP/SVZ –

SVP/SVZ emergency-escape locks with automatic locking action for single-leaf doors

- Automatic and immediate locking of doors after each closure
- Insurance-compliant locking with 20 mm deadbolt throw
- Two-point locking via latch bolt and engagement of the clawbolt latch
- The emergency escape function allows you to open the door in the escape direction at any time by operating the lever handle (not SVZ)
- Can be used on wide and narrow stile doors, for profile and round cylinders
- 24 mm forend width, use in left-handed/ right-handed design
- Corrosion-protected lock case
- Faceplate and strike plate made of stainless steel. Strike plate is included in shipment

SVP 5000

- Purely mechanical lock with emergency escape function

SVP 4000

- An electrically-monitored panic lock
- With integrated manipulation-protected detectors for monitoring latches, cylinders, handles and latch bolts

SVP 6000

- An electrically-monitored panic lock with a split follower for the electrical engagement/disengagement the outside handle and manipulation-protected detectors
- Status message for trip latch, bolt, cylinder locking and lever handle

SVZ 6000

- Access control lock, like the SVP 6000 but without an emergency escape function

SVP 2000

- Motor lock with manipulation-protected detectors and sequential control for the highest security
- Status message for trip latch, bolt, cylinder locking and lever handle
- Direct connection to dormakaba ED swing door drives or a SafeRoute escape route security system

SVP 2000 F

- Motor lock with integrated power reserve module (PR module) for fire and smoke doors and with manipulation-protected detectors
- Status message for lock rod and lever handle
- Direct connection to dormakaba ED swing door drives or a SafeRoute escape route security system
- With integrated PR module for use in fire and smoke doors

SVP 7000 Air

- Electrical battery-powered switch lock with split follower for electrical engagement and disengagement of the outside lever handle

F Certificate of suitability

The SVP/SVZ locks with automatic locking action have been approved and quality-tested by the notified body MPA in Dortmund.
An approval or verification of suitability in conjunction with the respective fire and smoke door may be required.

The SVP locks in combination with lever handles and panic bars from various manufacturers have been certified according to EN 179 "Emergency exit devices operated by a lever handle or push pad" and EN 1125 "Panic exit devices operated by a horizontal bar", and therefore carry the CE mark of conformity CE.

● Yes – No ○ Optional

¹⁾ PERMANENT OPEN function also permissible on fire and smoke doors, as the doors have a tumbler in case of a fire.

²⁾ For fire and smoke doors in conjunction with the PR module (emergency power storage).

³⁾ In fire and smoke doors not approved for permanent door release, as tumbler is not guaranteed in the event of a fire.

⁴⁾ In combination with SVP-S Air or via hand-held transmitter.

⁵⁾ Only in combination with the ED 100/250, the SVP-S 4x control unit (firmware 4.7 and higher) or SafeRoute (firmware 1.9).

SVP 5000 – Emergency-escape lock with automatic locking action

SVP 5xxx

Panic lock with automatic locking action and optimised mechanical sequential control. Two-point locking activated by pre-loaded spring when door closes. Non-handed trigger (24 mm forend versions can be used DIN L/R), panic unlocking via lever handle, change to unlocking function with key access from the outside. Steel bolt, projection 20 mm. 9 mm square-section follower. Corrosion-protected lock case in DIN dimensions, complete with forend and strike plate in stainless steel, included in delivery. Certified in accordance with EN 179 and EN 1125 for use with panic door fittings. Protection against intruders up to resistance class 2 in suitable door systems.

SVP 6000 – Switch-monitored panic lock with automatic locking action

SVP 6xxx

Microswitch-monitored emergency-escape lock with automatic locking action, versions for narrow stile (67xx/68xx) or timber doors (62xx/63xx), electrically monitored, with split follower, electrically activated outside handle and optimised mechanical sequential control. With status monitoring for detecting "Locked" (> 90%), "Unlocked" (< 10% of the latch bolt path), "door open/closed" (via trip latch) as well as "Lever handle operation/emergency unlocking" and "Cylinder contact". When there is no power, the outside handles are disengaged (operating current) or engaged (closed-circuit current). The outside handle is engaged or disengaged by activating the solenoid (for example, via the access control system). The lever handle is always engaged in the direction of escape. Activation of the outside handle is effected via a GND contact by means of a potential-free NO (operating current) or NC (closed-circuit current). Permanently open mode possible (permanent engagement of outside handle, e.g. for daytime mode). Two-point locking activated by pre-loaded spring when door closes. Non-handed trigger (24 mm forend versions can be used DIN L/R). Unlocking from the outside using key or engaged outside handle. Steel bolt, projection 20 mm. Split 9 mm square-section follower. Corrosion-protected lock case in DIN dimensions, complete with forend and strike plate in stainless steel, included in delivery. Protection against intruders up to resistance class 2 in suitable door systems.

Supply voltage	12 or 24 V DC stabilised (+/- 10%)
Power input	0.15 A (max. 0.3 A)
Maximum load current	max. 30 V DC, 100 mA
Status messages via potential-free contacts	

SVP 62xx/63xx

SVP 6000 version for wide stile doors. Operating or closed-circuit operation universally adjustable at the lock. Connection universal to 12 V DC/24 V DC (stabilised) without previous change-over. Emergency side can be changed over by an authorised personnel with special tools. Certified in accordance with EN 179 and EN 1125 for use with panic door fittings.

SVP 67xx/68xx

SVP 6000 version for narrow stile doors. Operating current version or closed-circuit current version. Connection universal to 12 V DC/24 V DC (stabilised) without previous change-over. Certified in accordance with EN 179 and EN 1125 for use with panic door fittings.

Installation

- ☐ Timber rebated door
- ☐ Timber non-rebated door
- ☐ Narrow stile door
- ☐ DIN left ☐ DIN right

Escape route opening

- ☐ Escape route opening outwards (normal case)

- ☐ Escape route opening inwards (special case)

Door may always be opened in the direction of escape

- Direction of escape
- Lever handle permanently engaged
- Electrically activated lever handle
- Hinge L/R

perforation

- ☐ Profile cylinder PC
- ☐ Round cylinder RC
- ☐ **B** Backset _____ mm

- ☐ Closed-circuit current (only with narrow stile door, timber door variant is adjustable)
- ☐ Operating current (only with the narrow stile door, timber door variant is adjustable)

Required accessories (to be ordered separately):

- ☐ dormakaba SVP-A connection cable
- ☐ dormakaba cable loop/spiral cable
- ☐ dormakaba NT power supply unit

Other accessories

00 – Operating current version (Fail Secure)

50 – Closed-circuit current version (Fail Safe)

Note:

In the variant with a 24 mm faceplate, the locks for DIN-L inwards/DIN-R outwards or DIN-R inwards/DIN-L outwards are identical.

Door may always be opened in the direction of escape

➔ Direction of escape

⌵ Lever handle permanently engaged

⌵ Electrically activated lever handle

● Hinge L/R

Opening outwards (normal case)

Opening inwards (special case)

SVZ 6000 – Automatically locking access control lock

SVZ 6xxx F

Access control lock with automatic locking action, electrically monitored, with single follower, electrically activated lever handle in operating current version or closed-circuit current version, and optimised mechanical sequential control. With status monitoring for detecting "Locked" (> 90% of the latch bolt path), "Unlocked" (< 10% of the latch bolt path), "Door open/closed" via trip latch as well as "Handle operation/cylinder contact". When there is no power, the lever handles are disengaged (operating current) or engaged (closed-circuit current). By means of actuating the solenoid in the lock (e.g. via the access control system), the lever handles can be engaged or disengaged. Activation of the lever handle is effected via a GND contact by means of a potential-free NO (operating current) or NC (short-circuit current). PERMANENTLY OPEN mode possible (permanent engagement of lever handle, e.g. for daytime operation). Two-point locking device activated by pre-loaded spring when door closes. Non-handed trigger (24 mm forend versions can be used DIN L/R). Unlocking with a key or lever handle (lever handle can be engaged). Steel bolt, projection 20 mm. Split 9 mm square-section follower.

Corrosion-protected lock case in DIN dimensions, complete with forend and strike plate in stainless steel, included in delivery. Protection against intruders up to resistance class 2 in suitable door systems.

Supply voltage	universal on 12V DC/24V DC
Power input	0.15 A (max. 0.3 A)
Maximum load current	max. 30 V DC, 100 mA
Status messages via potential-free contacts

SVP 7000 Air – The battery-operated panic lock with automatic locking action

SVP 7xxx Air

Panic lock with automatic locking action for wide stile doors, battery-operated, with split follower and outside handle that can be electrically activated. Operating current. The outside lever handle can be engaged or disengaged via the transfer box SVP-S AIR (integrated in the existing access control system) or the SVP-AIR hand-held transmitter. The lever handle is always engaged in the direction of escape. No wiring of the door required. Short-term unlocking or permanently open modes possible (permanent engagement of outside handle). Programming of up to 99 authorisations. Can change the battery without having to dismantle the lock, secured by the lock cylinder. Steel latch bolt 20 mm projection; 9 mm square-section follower. Corrosion-protected lock case in DIN dimensions, complete with forend and strike plate in stainless steel, included in delivery. Certified in accordance with EN 179, EN 1125

SVP 2000 – Emergency escape motor lock with automatic locking action

SVP 2xxx

Motorised emergency-escape lock with automatic locking action and optimised mechanical and electronic sequential control. Possible operation modes: direct by analogue actuation, with external control unit SVP-S 3x (Switzerland) and SVP-S 4x (with full functionality) or via DCW® bus to SafeRoute and/or ED 100/250. LED status display shows error messages, such as incorrect operating voltage or bus connection interrupted and more! With status monitoring for detecting "Locked" (> 90%), "Unlocked" (< 10% of the latch bolt path), "Door open/closed" (via trip latch) as well as "Handle operation/emergency unlocking" and "Cylinder contact". Two-point locking activated by pre-loaded spring when door closes. Universal trip latch (24 mm faceplate versions can be used LH or RH). Emergency unlocking using lever handle in accordance with EN 179 or panic bar in accordance with EN 1125 as well as a transmission function for unlocking from the outside using keys. Steel bolt 20 mm projection, 9 mm square-section follower. Corrosion-protected lock case in DIN dimensions, complete with forend and strike plate in stainless steel, included in delivery. Protection against intruders up to resistance class 2 in suitable door systems.

F For fire and smoke doors only in conjunction with the PR module (emergency power storage).

Supply voltage	24 V DC stabilised (+/- 15%)
Power input	0.05 A (max. 0.3 A)
Bus operation	DCW® bus or CAN bus (ISO 11898-3)
"Locked" signal:	Output switches to GND, 30 mA at max. 30 V DC

SVP 2000 F – Emergency escape motor lock with automatic locking action and integrated power reserve module for fire and smoke doors

SVP 2xxx F 

Emergency escape motor lock with automatic locking action and optimised mechanical and electronic sequential control. Suitable for fire and smoke doors through an integrated PR module, without permanent door release. Possible operation modes: direct by analogue actuation, with external control unit SVP-S 3x DCW® (Switzerland) and SVP-S 4x DCW® (stand-alone with full functionality) or via DCW® bus to SafeRoute and/or ED. LED status display shows error messages, such as incorrect operating voltage or bus connection interrupted and more! Duisburg function: compatible with all kinds of cylinders, even electronic and free wheel cam cylinders. With status monitoring for detecting "Locked" (> 90%), "Unlocked" (< 10% of the latch bolt path), "Door open/closed" (via trip latch) as well as "Handle operation/emergency unlocking" and "Cylinder contact". Two-point locking activated by pre-loaded spring when door closes. Universal trip latch (24 mm faceplate versions can be used LH or RH). Emergency unlocking using lever handle in accordance with EN 179 or panic bar in accordance with EN 1125, as well as a transmission function for unlocking from the outside using keys. Steel latch bolt 20 mm projection, 9 mm square-section follower. Corrosion-protected lock case in DIN dimensions, complete with forend and strike plate in stainless steel, included in delivery. Connection to 24 V. Uniform connection using the SVP-A 1100 connection cable (to be ordered separately). Protection against intruders up to resistance class 2 in suitable door systems.

Supply voltage	24 V DC stabilised (+/- 15%)
Power input	0.05 A (max. 0.3 A)
Bus operation	DCW® bus or CAN bus (ISO 11898-3)
"Locked" signal:	Output switches to GND, 30 mA at max. 30 V DC

SVA/SVI lock combinations. Emergency-escape locks with automatic locking action for double-leaf doors

The combination of an active door leaf lock (SVA) and a passive door leaf lock (SVI) automatically locks the door every time it is closed. Both the passive and active door leaves can be opened in the direction of escape at any time in accordance with EN 179 or EN 1125.

- Insurance-compliant locking with two-point locking activated via bolt and clawbolt latch on the active door leaf and a rod lock system on the passive door leaf
- Can be used on timber and narrow stile doors, for profile and round cylinders
- Active and passive door leaf locks combinable

SVA active leaf door lock

SVA 5000

- Purely mechanical lock with emergency escape function and mechanical sequential control

SVA 4000

- Electrically monitored emergency-escape lock
- With integrated tamper-proof detectors for monitoring latches, cylinders, handles and latch bolts

SVA 6000

- Electrically monitored emergency-escape lock with split follower for the electrical engagement/disengagement of the outside lever handle
- Status message for trip latch, bolt, cylinder locking and lever handle

SVA 2000

- Operation modes for the motor lock: Analogue with control unit, via DCW® or CAN-BUS or autonomously without control unit.
- Status message for trip latch, bolt, cylinder locking and lever handle
- Direct connection to dormakaba ED swing door drives or a SafeRoute escape route security system

SVA 2000 F

- Motor lock like SVA 2000, but with integrated PR module for use in fire and smoke doors (excluding permanent door release function)

SVI passive door leaf locks

SVI 5000

- Purely mechanical lock with emergency escape function

SVI 4000

- Electrically monitored emergency-escape lock
- Status message for lock rod and lever handle

SVI 2000 F

- Operation modes for the motor lock: Analogue to control unit, controlled via SVA 2000/F
- Status message for lock rod and lever handle
- Direct connection to dormakaba ED swing door drives or a SafeRoute escape route security system
- With integrated PR module for use in fire and smoke doors

F Certificate of suitability

The SVP/SVI locks with automatic locking action have been approved and quality-tested by the notified body MPA in Dortmund.
An approval or verification of suitability in conjunction with the respective fire and smoke door may be required.

The SVA/SVI locks in combination with lever handles and panic bars from various manufacturers have been certified according to EN 179 "Emergency exit devices operated by a lever handle or push pad for escape route doors" and EN 1125 "Panic exit devices operated by a horizontal bar", and therefore carry the CE mark of conformity CE.

● Yes – No ○ Optional

¹⁾ PERMANENT OPEN function also permissible on fire and smoke doors, as the doors have a tumbler in case of a fire.

²⁾ For fire and smoke doors in conjunction with the PR module (emergency power buffer).

³⁾ In fire and smoke doors not approved for permanent door release, as approval is not guaranteed in the event of a fire.

⁴⁾ Depending on the SVA lock used on the active leaf.

⁵⁾ Only in combination with ED 100/250, SVP S3x /4x or SafeRoute.

Components of an SVA/SVI locking system

01 Bar strike plate for door frame and switch lock for top drive dead bolt

02 Shoot bolt guide and ground keeper

03 SVP-A connection cable and cable loop from door leaf to door frame when using electrical emergency-escape locks

04 SVI emergency-escape lock for the passive door leaf with bottom and top drive dead bolt. The SVI passive door leaf lock serves as a strike box for an SVA emergency-escape lock.

SVI passive door leaf lock available in different variants for steel frame and timber doors.

05 SVA emergency-escape lock for the active door leaf is available in different variants for narrow stile and timber doors.

06 Optional: Motor lock control unit only necessary for SVA 2xxx or SVA 2xxx F when the control of the emergency-escape lock does not take place directly via the data bus to the TMS, SafeRoute or automatic actuator ED 100/250. See "Accessories" chapter.

01

01 Bar strike plate

For mounting on the door frame for holding the drive dead bolt in the passive door leaf.

02 Switch lock

For installation on the passive door leaf.

03 Top drive dead bolt

Locking element of the SVI xxxx passive door leaf lock.

04 Cable loop

dormakaba offers various solutions for the transition of the connection cable from the door leaf to the door frame. The cable loop is not required for the SVA 5xxx and SVI 5xxx. See "Accessories" chapter.

05 SVP A connection cable (not shown)

The connection cable for connecting electrical emergency-escape locks. The connection cable is not required for the SVA 5xxx and SVI 5xxx. See "Accessories" chapter.

06 Bottom drive dead bolt

07 Shoot bolt guide

For installation on the passive door leaf.

08 Ground keeper

Simple ground keeper for holding the bottom drive dead bolt.

09 Adjustable ground keeper

Alternative to simple ground keeper for receiving the bottom drive dead bolt.

SVA 5000 – Emergency-escape lock with automatic locking action

SVA 5xxx

Active emergency-escape lock with automatic locking mechanism for the active door leaf in double-leaf door systems with optimised mechanical sequential control. Duisburg function: compatible with all kinds of cylinders, even electronic and free wheel cam cylinders. Two-point locking activated by pre-loaded spring when door closes. Universal trip latch (270 x 24 mm faceplate versions can be used for DIN left and right). Emergency unlocking using the lever handle or panic bar according to EN 179, EN 1125 and EN 12209. Panic function for unlocking from the outside using a key. Steel bolt with 20 mm projection, 9 mm square-section follower. Corrosion-protected lock case to DIN dimensions, complete with faceplate and strike plate in stainless steel included in delivery.

Installation

- ☐ Timber rebated door
- ☐ Timber non-rebated door

SVA 4000 – Emergency-escape lock with automatic locking action and electrical status monitoring

SVA 4xxx 

Emergency-escape lock with automatic locking action for double-leaf door systems, electric monitoring and optimised mechanical sequential control. With status monitoring for detecting "locked" (> 90 %), "unlocked" (< 10 % of the latch bolt path), "door open/closed" (via trigger) as well as "handle operation/emergency unlocking" and "cylinder contact". Two-point locking activated by pre-loaded spring when door closes. Non-handed trigger (24 mm forend versions can be used DIN L/R). Emergency unlocking by lever handle, change to unlocking function with key access from the outside. Steel bolt, projection 20 mm. 9 mm square-section follower Corrosion-protected lock case in DIN dimensions, complete with forend and strike plate in stainless steel, included in delivery. Certified in accordance with EN 179 and EN 1125 for use with panic door fittings.

Maximum load current 100 mA at max. 30 V DC
Status messages via potential-free contacts

SVA 6000 – Microswitch-monitored emergency-escape lock with automatic locking action

SVA 6xxx   

Microswitch-monitored emergency-escape lock with automatic locking action for double-leaf door systems, versions for narrow stile (67xx/68xx) or timber doors (62xx/63xx), electrically monitored, with split follower, electrically-activated outside lever handle and optimised mechanical sequential control. With status monitoring for detecting "Locked" (> 90%), "Unlocked" (< 10% of the latch bolt path), "door open/closed" (via trip latch) as well as "Lever handle operation/emergency unlocking" and "Cylinder contact". When there is no power, the outside handles are disengaged (operating current) or engaged (closed-circuit current). The outside handle is engaged or disengaged by activating the solenoid (for example, via the access control system). The lever handle is always engaged in the direction of escape. Activation of the outside handle is effected via a GND contact by means of a potential-free NO (operating current) or NC (closed-circuit current). Permanently open mode possible (permanent engagement of outside handle, e.g. for daytime mode). Two-point locking activated by pre-loaded spring when door closes. Non-handed trigger (24 mm forend versions can be used DIN L/R). Unlocking from the outside using key or engaged outside handle. Steel bolt, projection 20 mm. Split 9 mm square-section follower. Corrosion-protected lock case in DIN dimensions, complete with forend and strike plate in stainless steel, included in delivery.

Supply voltage	12 or 24 V DC stabilised (+/- 15%)
Power input	0.15 A (max. 0.3 A)
Maximum load current	100 mA at max. 30 V DC
Status messages via potential-free contacts

Simply good, twice easy.

Where ease of handling and quality are called for.

SVA 2000 – Emergency escape motor lock with automatic locking action

SVA 2xxx

Motorised emergency-escape lock with automatic locking action for double-leaf doors with optimised mechanical and electronic sequential control. Possible operation modes: direct by analogue actuation, with external control unit SVP-S 3x (Switzerland) and SVP-S 4x (with full functionality) or via DCW® bus or CAN bus to SafeRoute and/or ED 100/250. LED status display shows error messages, such as incorrect operating voltage or bus connection interrupted and more! With status monitoring for detecting "Locked" (> 90%), "Unlocked" (< 10% of the latch bolt path), "Door open/closed" (via trip latch) as well as "Handle operation/emergency unlocking" and "Cylinder contact". Two-point locking activated by pre-loaded spring when door closes. Universal trip latch (24 mm faceplate versions can be used LH or RH). Emergency unlocking using lever handle in accordance with EN 179 or panic bar in accordance with EN 1125 as well as a transmission function for unlocking from the outside using keys. Steel bolt 20 mm projection, 9 mm square-section follower. Corrosion-protected lock case in DIN dimensions, complete with forend and strike plate in stainless steel, included in delivery. Connection to 24 V DC.

F For fire and smoke doors only in conjunction with the PR module (emergency power storage).

Supply voltage	24 V DC stabilised (+/- 15%)
Power input	0.05 A (max. 0.3 A)
Bus operation	DCW® bus or CAN bus (ISO 11898-3)
"Locked" signal:	Output switches to GND, 30 mA at max. 30 V DC

M-SVP – Multipoint panic lock

The substantial benefits of the M-SVP multipoint emergency-escape locks with automatic locking action include: automatic locking of doors immediately after every closure, and heightened burglar resistance.

The 3-point locking devices with rotating bolts or latch bolts and the 20 mm protrusion main bolt lock the door in an insurance-compliant manner and provide heightened burglar resistance.

The panic function of the M-SVP locks ensures that the door can be opened at any time from the inside, in the direction of escape, simply by operating the handle.

Apart from the motorised opening of doors via access control systems (radio key, transponders, etc.), mechanical unlocking from the outside is possible at any time.

The programme includes 5 model series:

M-SVP 5000

Purely mechanical multipoint lock with panic function and automatic locking action

M-SVP 3000

Electromechanical multipoint lock with panic function, automatic locking mechanism and motorised unlocking.

M-SVP 2200 DCW®

Multipoint motor lock with panic function, motorised locking and unlocking as well as integrated DCW® interface

M-SVP 5500

Mechanical multipoint lock for double-leaf panic doors with automatic locking action

M-SVP 3500

Electromechanical multipoint lock for double-leaf panic doors with automatic locking action and motorised unlocking

Benefits – point by point

- Automatic and immediate locking of doors after each closure.
- Insurance-compliant locking through 20 mm deadbolt projection, additional protection through rotating bolt or deadbolt at the top and bottom
- Enhanced burglar resistance through multipoint lock
- Thanks to the panic function, the door can be opened in the direction of escape at any time using the lever handle
- Can be used on wide and narrow stile doors, for profile and profile round cylinders
- Profile-related supply packages
- Integration in access control and TMS systems possible (not M-SVP 5000)
- Approved for use in emergency exits and escape routes, suitable for fire doors
- If there is a power failure, the door can still be locked and unlocked from the inside and the outside with the key

F Verification of suitability

The M-SVP locks with automatic locking function are tested and quality-monitored by the notified body MPA in Dortmund. An approval or verification of suitability in conjunction with the respective fire and smoke door may be required.

The M-SVP locks are certified in conjunction with lever handles and panic bars from various manufacturers in accordance with EN 179 "Emergency exit devices operated by a lever handle or push pad" and EN 1125 "Panic exit devices operated by a horizontal bar", and therefore carry the conformity mark CE.

M-SVP 5000 – Multipoint panic lock with automatic locking action

Multipoint panic lock with automatic locking action and latch bolts/main bolts in anti-force-back design. Heightened burglar resistance. Transmission function for unlocking from the outside using a key.

The integrated panic function ensures that the door can be opened in the escape direction at any time simply by using the lever handle. The automatic locking mechanism is automatically triggered by magnets when the door is closed.

- Steel latch bolts and main locks, 20 mm protrusion
- 9 mm square-section follower
- For use in wooden, PVC and aluminium doors
- Approved in escape route doors in accordance with DIN EN 179 and DIN EN 1125
- Suitable for use in fire and smoke doors

Supply sets consisting of:

- M-SVP 5000 lock
- Striking strip or striking plates and accessories
- Installation manual and milling drawing

Supply sets for steel and aluminium narrow stile doors

M-SVP 3000 – Multipoint emergency-escape lock with automatic locking action

Electromechanical multipoint panic lock with automatic locking action and latch bolts and main bolts in anti-force-back design. Heightened burglar resistance.

Motorised unlocking (short-term and permanent unlocking) via access control systems, transmission function for unlocking from the outside using a key.

The integrated panic function ensures that the door can be opened in the escape direction at any time simply by operating the lever handle.

The automatic locking mechanism is automatically triggered by magnets when the door is closed.

- Connection of external access control systems possible
- Designed for use in escape route security systems
- Steel latch bolts and main locks, 20 mm protrusion
- 9 mm square-section follower
- Operating voltage 12 V DC
- For use in wooden, PVC and aluminium doors
- Approved in escape route doors in accordance with DIN EN 179 and DIN EN 1125
- Suitable for use in fire and smoke doors

Supply sets consisting of:

- M-SVP 3000 lock
- Striking strip or striking plates and accessories
- 10 m connection cable
- Installation manual and milling drawing

Required accessories

(to be ordered separately):

- M-SVP 3000 Control unit
- dormakaba KÜ/KS cable loop/spiral cable/
LK detachable cable loop
see Page 77

M-SVP 3000 Control unit

Control unit for operation of the M-SVP 3000 electro-mechanical multipoint panic lock with automatic locking action.

- Makes motorised unlocking of the door possible, via different access control systems
- Mounted in surface-mounted housing, including power supply unit
- Supply voltage: 230 V AC +/- 10%.
- Housing dimensions
(W x H x D): approx. 112 x 200 x 84 mm

Order no. 16500000218

M-SVP 2200 DCW® – Multipoint motor lock with automatic locking action and emergency escape function

Multipoint motor lock with automatic locking action and panic function. It has one rotating bolt and one bolt each at the top and the bottom of the lock for a particularly firm blocking lever, as well as a main lock with 20 mm projection. Heightened burglar resistance.

Motorised unlocking (short-term and permanent unlocking, plus additional day latch function) via access control systems, transmission function for unlocking from the outside using a key. The integrated panic function ensures that the door can be opened in the escape direction at any time simply by using the door fitting. Certified according to EN 179 and EN 1125 for use with panic door fittings.

Motorised automatic locking takes place automatically when the door is closed. If a SafeRoute escape route security system or an ED swing door operator with a DCW® upgrade card is installed, the M-SVP 2200 DCW® can even be connected directly via the DCW® and operated with full functionality – without the need for a separate control unit. With limited functionality, an M-SVP 2200 can also be used without SafeRoute, ED 100/250 or without a control unit.

The optional SVP-S4x DCW® control unit can be used to operate the M-SVP 2200 DCW® with its full range of functions, even in stand-alone mode.

With the following feedback:

"door open/closed", "door locked/unlocked", "handle operation/emergency unlocking".

- Steel bolts, rotating bolts and main locks
- Main lock, projection 20 mm.
- 9 mm square-section follower
- Free wheel cam cylinders (forced disengagement required)
- Operating voltage 24 V DC
- For use in wooden, PVC and aluminium doors
- Approved for use in emergency exit doors in accordance with DIN EN 179 and DIN EN 1125
- Suitable for use in fire and smoke doors with M-SVP PR DCW® module

Supply sets consisting of:

- M-SVP 2200 DCW® lock
- Striking strip or striking plates and accessories
- 10 m connection cable
- Including Installation manual and milling drawing

Required accessories

(to be ordered separately):

dormakaba cable transition/cable loop/LK detachable cable transfer see Page 77

Optional:

SVP-S4x/3x DCW® control unit, M-SVP PR DCW® module see Page 82

M-SVP 5500 – Multipoint panic lock with automatic locking action for the active door leaf of double-leaf doors

Multipoint panic lock with automatic locking action for the active door leaf of double-leaf doors.

Increased burglar resistance up to resistance class RC-3 in suitable door systems. The automatic locking mechanism is automatically triggered by magnets when the door is closed.

The integrated panic function ensures that the door can be opened in the escape direction through a simple actuation of the operating element in accordance with EN 179 or EN 1125 (for example, lever handle or panic bar). Can be combined with horizontal pushbar dormakaba PHA 2501 and panic bars from other suppliers as per test certificate. Rotational angle at least 30°.

- 9 mm square-section follower
- Steel latch bolts and deadbolts, 20 mm protrusion
- For use in aluminium doors.
- Transmission function for unlocking from the outside using a key.
- Approved for use in escape routes in accordance with EN 179 and EN 1125
- Suitable for use in fire and smoke doors

Supply sets consisting of:

- M-SVP 5500 lock
- Accessories
- Installation manual
- Milling drawing

M-SVP-GK

Panic second leaf lock for automatic locking action in the passive door leaf of double-leaf full panic doors; for combination with M-SVP 3500 and M-SVP 5500 multipoint panic locks with automatic locking action on the active door leaf side.

Supply set consisting of:

- Second leaf lock including latch guides
- Ground keeper
- Switch lock incl. mounting accessories
- Shoot bolt including shoot bolt guide
- Carry bar
- Striking plates
- Magnetic contact
- Installation manual
- Milling drawing

M-SVP 3500 – Multipoint panic lock with automatic locking action for the active door leaf of double-leaf doors

Multipoint panic lock with automatic locking action for the active door leaf of double-leaf doors; with motorised unlocking (short-term and permanent unlocking) via access control.
Increased burglar resistance up to resistance class RC-3 in suitable door systems.

The integrated emergency escape function ensures that the door can be opened in the direction of escape through a simple actuation of the operating element in accordance with EN 179 or EN 1125 (for example, lever handle or panic bar). Can be combined with horizontal pushbar dormakaba PHA 2501 and panic bars from other suppliers as per test certificate. Rotational angle on active leaf at least 30°, on inactive leaf 40°.

- 9 mm square-section follower
- Steel latch bolts and main locks, 20 mm protrusion
- For use in aluminium doors. Transmission function for unlocking from the outside using a key
- Approved for use in escape routes in accordance with EN 179 and EN 1125

Supply sets consisting of:

- M-SVP 5500 lock
- Accessories
- Connection cable
- Installation manual
- Milling drawing

Required accessory (must be ordered separately):

- dormakaba KÜ/KS cable transition/cable spiral / LK detachable cable transition

M-SVP-GK

Panic second leaf lock for automatic locking action in the passive door leaf of double-leaf full panic doors; for combination with M-SVP 3500 and M-SVP 5500 multipoint panic locks with automatic locking action on the active door leaf side.

Supply set consisting of:

- Second leaf lock including latch guides
- Ground keeper
- Switch lock incl. mounting accessories
- Shoot bolt including shoot bolt guide
- Carry bar
- Striking plates
- Magnetic contact
- Installation manual
- Milling drawing

M-SVP 3000 Control unit

Control unit for operation of the M-SVP 3000 electro-mechanical multipoint panic lock with automatic locking action.

- Makes motorised unlocking of the door possible, via different access control systems
- Mounted in surface-mounted housing, including power supply unit
- Supply voltage: 230 V AC +/- 10%.
- Housing dimensions
(W x H x D): approx. 112 x 200 x 84 mm

Order no.

Accessories for (M-) SVx locks

Depending on the type of lock and its application, specially designed accessories are required.

- 01** SVP/SVA/SVI connection cable
- 02** Cable loop
- 03** Rod lock system for SVI locks
- 04** TK Reed door contact
- 05** Power supply unit
- 06** SVP-S motor lock control unit

Connection cable

SVP-A 1100 connection cable. Highly flexible, 12-core, with coupling notched on one side for reverse-polarity protected connection to SVx 4000, 6000 and 2000 (F) locks.

	Article no.
SVP-A 1100 Length = 10 m, Ø = 6,5 mm	70932992
SVP-A 2100 Length = 20 m, Ø = 6,5 mm	70932993

Power supply units

	Article no.
PSU 24 flush-mounted power supply unit Switching power supply unit as per EN 60950 for installation in standard switch box, for power supply with direct current to dormakaba electric strikes, locks (except M-SVP) or control units. Connection wattage: 230 V AC +/-10% 50/60 Hz, output value: 24 V DC, 600 mA, output power: 12 W, dimensions: 51 x 51 x 24 mm (max. diagonal 55 mm), installation in standard switch box Ø 65 mm	56030101
NT-12 5, 12 V DC NT-12 V DC, 5 A, power supply unit for top hat rail mounting, 4 TE Note: not suitable for SVA/SVI 2000	56125200
NT-24 XS 2.5, 24 V DC (replaces 56125100) NT-24 XS 2.5, power supply unit for DIN rail mounting Input voltage: 100-240 V, Output voltage: 24 V DC +/- 1% 2.5 A, for installation in housing or control cabinets with at least IP 30, temperature range: -10 - +50°C, dimensions (W x H x D): 55 x 95 x 69 / 3 DU	70922048
RZ-01 power supply unit 24 DC Connected wattage: 230 AC +/-10%, maximum output current: 600 mA, in plastic housing IP21 with operating status indicator with LED, dimensions (W x H x D) approx. 160 x 80 x 50 mm	56030100

PR DCW® Power reserve module

Additional module for guaranteeing automatic relock in case of power failure; imperative for use in fire and smoke doors.

	Article no.
SVP-PR DCW® In SVP 2000 F, the PR module is integrated in the lock.	70922601
M-SVP-PR DCW® (not shown) Power reserve module for M-SVP series	70922603

Cable loop, reinforced spring

Robust stainless steel spiral with installation case for inserting flexible connection cables of up to Ø 7.5 mm. Guarantees a crush-free and tamper-proof connection between the leaf and frame of doors and windows.

	Article no.
01 Cable loop 260 Cable loop for door hinges with a pivot point of up to 18 mm and opening angle of up to 110°, length of the flexible spiral: 155 mm, installation dimensions of the installation case (B x H x D): approx. 24 x 260 x 17 mm	15811000
02 KÜ 480 Cable loop for door hinges with a pivot point of up to 36 mm and opening angle of up to 180°, length of the flexible spiral: 370 mm, installation dimensions of the installation case (B x H x D): approx. 24 x 480 x 17 mm	15813000

KS Spiral cable, reinforced spring

Robust stainless steel spiral with installation case for inserting flexible connection cables of up to Ø 7.5 mm. Guarantees a crush-free and tamper-proof connection between the leaf and frame of doors and windows.

	Article no.
01 KS 155 For door hinges with a pivot point of up to 18 mm and opening angle of up to 110°, length of the flexible spiral: 155 mm, installation dimensions (W x H x D) approx.: 17 x 255 x 15 mm	15817000
02 KS 370 For door hinges with a pivot point of up to 36 mm and opening angle of up to 180°, length of the flexible spiral: 370 mm, installation dimensions (W x H x D) approx.: 17 x 470 x 15 mm	15819000

LK-12 Detachable cable loop plug connection

Detachable cable loop plug connection for installation in the door frame, can be combined with the cable loops KÜ and spiral cables KS. 12-wire, with rear-side connection terminals. The plug-in screw terminal allows for an easy plugging-in and unplugging of the connection cables of SVP or M-SVP locks for flexible and quick installation, disassembly and maintenance of the door.

Dimensions (W x H x D): 24 x 300 x 3 mm
 Dimensions including PCB (W x H x D): 24 x 300 x 20 mm
 Maximum current-carrying capacity: 2 A
 Maximum voltage: 48 V DC
 Maximum cable cross-section for each connection: Ø 0.8 mm

	Article no.
LK-12	15813010

TK Reed door contact (not shown)	Article no.
Reed door contact for exclusive installation in wooden doors or for inlet installations (VdS no. G 191518, grade B), dimensions (Ø x T) approx.: 6 x 30 mm	
TK 103 brown	49931103
TK 110 white	49931110
Reed door contact for installation in wooden and metal doors, screw-on installation (VdS no. 191523, grade B), Dimensions (W x H x D) approx. 55 x 10 x 10 mm	
TK 203 brown	49931203
TK 210 white	49931210

	Article no.
M-SVP RK lock switch contact	15198001
VDS class C no. G119 034 with a potential-free changeover contact for monitoring the locking of doors. For example, for integration of an alarm system or a building management system. Version specially adapted to M-SVP locks. With spacer plate for use with U-shaped striking plates. Not suitable for use with SVP.	
Protection class:	IP 67
Connection cable:	LIYY 3 x 0,14 mm², 6m
Switching capacity:	30 V DC, 1 A
RK lock switch contact	15198000
VDS class C no. G103 079 with a potential-free changeover contact for monitoring the locking of doors. For example, for integration of an alarm system or a building management system. Version specially adapted to SVP locks!	
Protection class:	IP 68,
Connection cable:	6 m LIYY 3 x 0,14 mm²,
Switching capacity:	30 V DC, 200 mA

Accessories for SVP 7xxx Air	Article no.
SVP-S Air -I/O Box 12V-24V DC (not shown)	70790000
SVP-S Air for controlling the battery-operated radio lock SVP 7000 Air, for installation in standard flush-mounted sockets. 2 inputs for short-term and long-term unlocking and 2 outputs for the status queries "Activity" and "Low battery level". Connection: 12–24 V DC	
SVP Air transmitter	70790100
SVP Air transmitter/hand-held transmitter activates the battery operated SVP 7000 Air radio lock. The transmitter can be programmed in 1 separate or on multiple radio battery locks.	

SVP-S – Motor lock control units

dormakaba motor lock control units are used to control motor locks of the SSVP/SVA, SVP/SVA/SVI 2000 F and M-SVP 2200 series. In addition to a number of integrated functions, the control unit serves as an interface between the lock and the building control system, which, for example, allows for the output of status information or the integration of the system into an already existing IP (LAN) or LON network. The control units are available in various housing options – some with a power supply unit.

F Note

With motor locks, the PERMANENTLY OPEN function must not be used for fire and smoke doors, as the blocking lever of the door is not available during a fire.

If used on fire and smoke doors, the SVP/SVA/SVI 2000 F variant with integrated power reserve module should be used. Use of at least 1 additional power reserve module is absolutely necessary.

Comparison of SVP-S control units

		Usable motor lock control unit

● Yes – No

SVP-S 5x

For operation of the self-locking panic motor locks SVP/SVA 4000, 6000, 2000 as well as 2000 F or M-SVP 2200, in stand-alone mode without connection to the SafeRoute system or ED 100/250 – with full functional range. Control for motorised unlocking of the door (SVx 2000/F) or engagement of the exterior handle (SVx 6000), e.g. via access control systems (provided by the customer), is preconfigured. The control unit is connected to the lock via the DCW® system bus. If required (for retrofit), the control unit can be networked via LAN/LON. Extended parameterisation, visualisation and use of access control functions are carried out via the integrated RS-232 interface/LAN/LON using TMS Software Basic/Pro (from version 5.0).

Inputs: activation of the motor lock for short-term or permanent door release, day latch function (M-SVP only), smoke detector, door contact.

Outputs can be parameterised via TMS Soft.
Outputs: "locked", "unlocked", "door closed", "handle operation", "cylinder contact", alarm "door open", "collective alarm", "PR module test".

Connection: 24 V DC
Peak starting current: 150 mA (SVP)/1,5 A (M-SVP)
Closed-circuit current: approx. 70 mA
Maximum load current: 24 V DC; 0.5 A inductive, 1 A resistive

		Article no.
01	SVP-S 53 Installed in plastic housing, DIN rail mounting, IP 54. Housing dimensions (W x H x D): approx. 202 x 152 x 90 mm / 9 TE	70922053
02	SVP-S 54 Installed in plastic housing, DIN rail mounting, IP 54, with power supply unit NT 24 XS 2.5. Connection: 230 V AC +/-10 %. Housing dimensions (W x H x D): approx. 254 x 180 x 90 mm / 12 TE	70922054
03	SVP-S 55 Installed in metal housing with tamper contact, prepared for emergency power supply using rechargeable battery pack AP 12 V (max. 2 units) and cable set (both to be ordered separately), IP 30, with USV-24. Connection: 230 V AC +/-10 %. Housing dimensions (W x H x D): approx. 305 x 130 x 380 mm / 2 x 15 TE	70922055
04	SVP-S 56 For DIN rail mounting. Housing dimensions (W x H x D): approx. 125 x 95 x 60 mm / 7 TE	70922056

SVP-S 3x DCW® LON (not available for Germany)

SVP-S 3x DCW® control unit for operation of SVP 2000 DCW®, SVP 2000 DCW® F or M-SVP 2200 DCW® panic motor locks with automatic locking action in stand-alone operating mode with full functionality. This control unit offers various inputs and outputs, no software configuration required.

Configured for motorised locking and unlocking of the door via access control systems (on-site); control unit and lock are connected via the DCW® system bus. Inputs: activation of the motor lock for short-term or permanent door release, latch locking during day function (only M-SVP), smoke detector, door contact (only SVP). Outputs (potential-free): locked, unlocked, door closed, handle operated, cylinder contact, trigger, door opening alarm.

	Article no.
01 SVP-S 32 DCW® Supply for installation in switch cabinets and as replacement/ extension. PCB dimensions (W x H x D): approx. 75 x 79 x 15 mm	70922032
02 SVP-S 33 DCW® Installed in plastic housing, IP 40. Housing dimensions (W x H x D): approx. 200 x 120 x 90 mm	70922033
03 SVP-S 34 DCW® Installed in plastic housing, IP 54, with NT 24-1.5S power supply unit. Connection: 230 V AC +/-10%. Housing dimensions (W x H x D): approx. 200 x 120 x 90 mm	70922034
04 SVP-S 36 DCW® For top hat rail installation Dimensions (W x H x D): 160 x 105 x 82 mm	70922036

Note

When connecting SVI motorised 2000 F locks to the S3x and S4x control units, one of the additional I/O modules is required for the full number of feedback signals from the inactive leaf lock.

I/O modules

	Article no.
DCW® I/O module® Bus coupling module for connecting products with analogue switching contacts to the dormakaba DCW® system bus. Four optocoupler inputs (activation with 5-30 V AC/DC signals) for external control. Four potential-free outputs for the control of external components or for signalling. Pre-parameterised addresses for various requirements. Individual requirements can be freely programmed using the TMS Soft parameterisation software (switch-on delay, switch-off delay, pulse, etc.). Connection loads: Supply voltage via DCW® bus Power consumption max. 45 mA Optocoupler inputs: U _{in} , 5V/2,8 mA, 12 V/8 mA, 24 V/17 mA, 30 V/28 mA Relay outputs: 24 V DC/1 A Recommended cable: 1-4 (ST) Y 2 x 2 x 0,6 mm	56350100
SIO-DR I/O module I/O module for installation on to EN 50022 on TS35 top hat rail. 6 division units. Bus coupling module for connecting devices with analogue wiring technology to SafeRoute via the dormakaba DCW® system bus. Additional module with four optocoupler inputs and four potential-free outputs. Voltage supply via DCW® bus, power consumption quiescent current 6 mA, relay active max. 51 mA, power consumption of the inputs at 5 V-28 V AC/DC: 5 V/3 mA; 12 V/8 mA; 24 V/17 mA; 28 V/28 mA per input, max. current load per output 1 A, dimensions (W x H x D) 106 x 92 x 65 mm/6 DU, for installation in housing or switch cabinet of at least IP30, ambient temperature -10 °C to +55 °C.	56450001

Usable from SLI standard

Narrow stile door fitting combinations* approved to EN 1125

Individual door or active door leaf lock

Passive door leaf lock

PHA 2501 / 2540

Tested according to EN 1125 with dormakaba emergency-escape locks. Door widths up to 1,300 mm, door height up to 2,500 mm, standard bar projection <= 100 mm according to EN 1125 grade 1, jam-free, no visible mounting screws. Suitable for the use of europrofile cylinders (PC) and knob cylinders up to a diameter of 36 mm. Silver-coloured.

	Order no.
01 PHA 2501 RR Panic door fitting without push bar, can be used on narrow stile doors with SVP, SVA and M-SVP locks, distance 92 mm.	3501445130101
01* PHA 2540 RR Panic door fitting without push bar, can be used on narrow stile doors with M-SVP 2200 locks, distance 92 mm.	3501445134001
02 PHA 2501- PC0 (SVI) Panic door fitting without push bar, can be used on passive door leaf of double-leaf timber or narrow stile doors with SVI lock. With blind cover, for use without cylinder, silver-coloured.	3501445150101
02* PHA 2525 Panic door fitting without push bar, can be used on inactive leaf with M-SVP-GK inactive leaf locks.	3501445140101
03 PHA 2105 1,130 mm connecting/handle pushbar. Silver-coloured.	3501421050001

FP spindles 9 x 9 mm

	Order no.
04 PHS 5S Split spindle, 9 mm square, consisting of inside part 9 x 9 x 38.5 mm and a set of outside parts 9 x 9 x 46 mm, 9 x 9 x 53 mm, 9 x 9 x 56.5 mm and 9 x 9 x 60 mm, for use with locks with split follower (SVA 6xxx, SVP 6xxx, SVP 7xxx Air) and PHA 2501	3501478630501
05 four+ 908 spindle RR, 9 x 9 mm, for SVZ 6xxx in combination with four+ 112 lever handle set (EN 179) For 35–48 mm door thickness, length 97 mm For 49–61 mm door thickness, length 110 mm For 62–75 mm door thickness, length 123 mm	71000608 71000609 71000628
06 four+ 916 split spindle RR, 9 x 9 mm in combination with four+ 112/216 knob/lever set (EN 179) For 35–50 mm door thickness, length 90 mm For 51–65 mm door thickness, length 105 mm For 66–80 mm door thickness, length 120 mm	71000629 71000630 71000631
07 114FS spindle, 9 x 9 mm For inactive leaf sets, 105 mm (individually cut to length)	90050052907

* Recommendations apply to locks with profile cylinder PC and a distance A of 92 mm for narrow stile doors

Narrow stile door fitting combinations* approved to EN 179

Individual door or active door leaf lock

Our Sustainability Commitment

We are committed to foster a sustainable development along our entire value chain in line with our economic, environmental and social responsibilities toward current and future generations.

At dormakaba, we are dedicated to find sustainable solutions that reduce the environmental impact of both our operations and our products. To ensure transparency regarding our products' environmental impacts, we offer credentials such as Environmental Product Declarations (EPD), Health Product Declarations (HPD), and Recycled Content Certificates. These sustainability-related credentials provide insights into energy efficiency, material composition, recyclability, and compliance, empowering our customers to make informed choices and support their own sustainability objectives.

Download our sustainability-related product declarations and certifications here: <https://www.dormakabagroup.com/en/sustainability/product-declarations>
